

Puzzle Pieces

Some corals
time their
breeding by
the light of
the full
Moon.

Babies are born
during all lunar
phases, not just
during the full
Moon.

The Moon's pull
affects the flow
of blood in our
bodies.

There is no
"dark side" of
the Moon - each
side of the
Moon receives
about 14 days
of sunlight.

More dog bites
occur when the
Moon is full.

A "Blue Moon"
is the second
full Moon in a
month.

The Moon is
not really any
larger near
the horizon
than high in
the sky - it's
an illusion!

Twelve
astronauts
walked on
the Moon.

Some wildlife
are more
active when
the Moon is
full.

More babies are
born during the
full Moon than
during other
lunar phases.

The Moon pulls on the oceans and creates the tides.

The Moon makes no light of its own, but reflects sunlight.

The Moon spins, taking 27 days to go around once.

The Moon has gravity, which is about 1/6 that of Earth's.

The Moon is not spinning.

People have never actually been to the Moon.

The Moon has no gravity.

A "Blue Moon" has an electric blue color!

The Moon was thrown out of Earth's Pacific basin.

Werewolves roam during the full Moon.

The Moon is magnified near the horizon.

Getting your hair cut during the full Moon will make it grow faster.

The Moon formed from the debris of a giant impact early in Earth's history.

The Moon has an eternal "Dark Side."
