

The Lunar and Planetary Institute Presents

COSMIC EXPLORATIONS: A SPEAKER SERIES

April 17, 2008

To THE MOON! ITS SCIENCE, MYSTERIES, AND FUTURE SETTLEMENTS

NASA is preparing to return to the Moon, and this time, we will be there to stay. What do we need to know about the Moon first? What science will we do when we live there permanently? Planetary scientist Jeff Taylor shares the latest scientific insight into the Moon and its unexplored mysteries, and describes why both scientists and explorers want to return to Earth's neighbor.

This FREE presentation at 7:30 p.m. is geared toward all inquisitive adults and will be followed by a light reception and an opportunity to meet Dr. Taylor.

Speaker presentations held at
USRA's Lunar and Planetary Institute
3600 Bay Area Boulevard, Houston TX
