Addendum 1; HFE

ATM501

B-1

PAGE 1 OF 5

DATE 8/6/71

This addendum is an update to 501 B for HFE, Array A-2, D, E. Contained in this addendum is the discussion of the changes and the updated FMECA Work Sheets as follows.

<u>Page</u>	<u>line:</u>	<u>Was:</u>	<u>Is:</u>
3.7.73	3&4	2N4042H	2N4044
3.7.76	9&13	Film	G202A
3.7.76	6	R49 Film, etc.	Delete.
3.7.25	3	CR1 FD300-2	Delete

Replace the above sheet in ATM501 RevB with the enclosed sheets of Attachment "1".

PAGE 2 OF 5

DATE 8/6/71

There are three (3) CDRs covering three changes which have been made to the circuits since ATM 501B was released. ATM 501B contains the FMECA for the Heat Flow Experiment (HFE).

- I. CRD 60623: This CRD covers the addition of ferite beads to the emitters of the 2N2222 drive transistors on the Pulse Power Supply/ Constant Current Supply located on board P 104. This device was added to increase stability of the pulse power supply but it was subsequently proved that this change while adding stability was not needed in the final flight configuration. No FMECA work sheet addition is needed for the beads.

- II. CRD 60439: This CRD changed the configuration of the P-44 terminal board and effected a changed in the number of the same to P-74, (see Figure 1 for change). This circuit change deleted one diode which was a redundant inhibit to a low voltage condition on the survival power supply. The change was to assure adequate thermal control of off equatorial HFE. Other changes were slight adjustment in the linearizing resistors. The reliability is effected upward by the deletion of one diode. The effect is not significant on the over-all reliability.

- III. CRD 60438: This CRD effects the data amplifier and allows substitution of part for non-available items and to improve component mounting methods to avoid unit damage. See Figure 2. The effect on reliability is upward since the new design deletes one resistor. Q7 was also changed from a 2N4042 to 2N 4044; this not effecting the reliability either up or down. The effect is not significant on the over-all reliability.

These changes in no way effect the single point failure summary.
