

The Role of Robotic Missions

Overarching Question:

How can risk/cost be reduced through cooperation and partnerships in technological developments and demonstrations?

What can we learn from robotic missions before the next human landing?

What do we need to learn from robotic missions before lunar settlement and commercial development?

What role could be played by small, robotic lunar missions?

What role could state governments play in lunar exploration?

Can the CEV SIM Bay be used for deployment of robotic exploration missions?
