VENERA-D VENUS MODELLING WORKSHOP

**October 5-7, 2017 (week before 7th Solar System Symposium)
IKI, MOSCOW RUSSIA.**

WORKSHOP OBJECTIVES: to understand the limitations and needs of current models (e.g. General Circulation Models or GCMs, interior structure models and plasma environment), landing site selection, and the types of measurements needed to more adequately constrain parameters in the models and experiments. This would in-turn form a basis to better identify the types of instruments needed to achieve the important science of Venera-D.
