

## How to achieve, World Peace

by Elisa McGann

August 23, 2020

I dedicate this, to Marvin Helper, on his anniversary. He was a Lakota medicine man.

Just a few weeks ago, at face value, in the mirror; I faced myself for who I am, a mathematician. It was emotionally horrific, yet, emotionally euphoric. What drove this conclusion, were certain achievements in mathematics, and cosmology. I came across, what I call “sacred numbers”, or sacred mathematics. It is called so, because they can describe the beginning of life. They answer the most mysterious questions in cosmology, and about us, as a species. When I learned about sacred numbers, and sacred mathematics, I called it “dimensional dynamics”, and “Inter-dimensional dynamics”. The study of the dynamics, of dimensional boundaries. Numbers have an identity, and a purpose. Numbers are the code of the Universe.

It is utterly crucial, that I tell you. I’m alone on this. I’ve learned to work alone. Yet, today, I’m trying my best to make a difference in the world. Not to glorify myself, nor my work, or to belittle others; but my humble attempts go a long way, especially during these strange days. I am alone on this.

Dimensional dynamics, and Inter-Dimensional dynamics are about adding spacetime (st), value to numbers. The result is gravitational. Which means, what ever happens, happens on its own. By adding value to our planet, as a mathematical term, we can create an enlightenment event.

One of my personal favorite numbers is number one. Without it, we wouldn’t have any additional numbers. More importantly, numbers have all sorts of power. They are embedded with quality, and quantity. More importantly, it contains dimensional properties of space time. Number one describes (in embedded fashion), the first dimension, where as ( $c^2$ ); describes second dimensional properties, and so on, and so forth.

Number one, as you see it, contains divine power. You see, all it takes is one, to make a difference. If by chance you have several unit terms, you can have a sequence. Add sequences together, and you have a code. Organize several codes, and you have an algorithm. Just this one algorithm can help you compute scenarios, decipher observations, even predict future events.

Now, lets look back at number one. Our Planet, as a number, not just any number, I’m talking about number one. By scientific definition, our Earth, generates 1g force of gravity. It is the beginning of our code, as we know it. So, our precious planet posses this divine code generator called 1g force. Along with Earth’s electro-magnetic influence, she generated our DNA. So, our planet, is our mother basically. Both must be factors, for life to be generated naturally, on a planet. She gives birth to us, she provides medicines for living beings to use, which is an astronomical coincidence, by my standards. I guess plants and living beings adapted to each other. With out a doubt, our planet is the beginning of our story, regardless if the journey of our amino acids were the result, of a panspermia event. Yet, unfortunately, we take her for granted. By exploiting her natural resources, global pandemics of our fauna. Perhaps, even our flora. What we do to our planet, is what we do to ourselves. No one else does this, but us.

By creating a NASA EarthCam app, we could shed light to our humility, and view our selves for who, and what, we are, humans, from planet Earth. In my opinion, we have taken our mother Earth, for granted. Some of us, even doubt, it’s actual shape. We live in a two-

dimensional plane. Our world is this plane; not this planet that's how we know it as. NASA's EarthCam app will enable us to appreciate our planet, at face value. We will begin to develop a personal relationship with our planet. We will even begin to take care of her. And her, of us; for the next generations, after us.

NASA's Artemis missions will be the only opportunity for us, to do this. We are looking for a specific "vantage point". From the south Lunar pole, where planet Earth will hopefully be in full view. Four recording cameras can be used, perhaps less. Only to capture additional dimensions of the lunar sky. That way, we have a constant video stream, of our planet. The first Artemis missions can install the recording devices, we on Earth can create an app, suitable for this data. And release it to the public. Public engagement, and superb marketing; will ensure the success of this app.

If we create a simple, yet grandiose avenue, billions upon billions will follow. It can be viewed as a gravitational result. People, as one, will do the right thing; and protect our planet. Well!? How does sacred mathematics fall into this? With EarthCam app we can view our home, as one planet, one people, one race, just one identity. This is one step closer, to achieving World Peace.

I would love to close this report, with one of my favorite writings. It describes, a dot. It was written by one of Earth's humblest human beings. He is almost like a prophet. Because, he speaks the words, of our actual salvation, which are Education, Tolerance, and Exploration...in my opinion that is. Without this writing, my report would mean nothing. Because, this is working progress, years in the making. It's not about me, it's about us.... Enjoy!

"Consider again that dot. That's here. That's home. That's us. On it, everyone you love, everyone you know, everyone you ever heard of, every human being who ever was, lived out their lives. The aggregate of our joy, and suffering, thousands of confident religions, ideologies, and economic doctrines, every hunter and forager, every hero and coward, every creator and destroyer of civilization, every king and peasant, every young couple in love, every mother, and father, hopeful child, inventor and explorers, every teacher of morals, every corrupt politician, every "superstar", every "supreme leader", every saint and sinner in the history of our species lived there—on a mote of dust suspended in a sunbeam. The Earth is a very small stage, in a vast cosmic arena. Think of the rivers of blood spilled by all those generals and emperors, so that in glory, and triumph, they could become the momentary masters of a fraction, of a dot. Think of the endless cruelties visited by the inhabitants of one corner of this pixel, on the scarcely distinguishable inhabitants of some other corner, how frequent their misunderstandings. How eager, they are, to kill one another, how fervent their hatreds. Our posturing, our imagined self-importance, the delusion that we have some privileged position in the universe, are challenged by this point, of pale light. Our planet is a lonely speck in the great enveloping cosmic dark. In our obscurity, in all this vastness, there is no hint that help will come from elsewhere, to save us from ourselves. The Earth is the only world, known so far to harbor life. There is nowhere else, at least in the near future, to which our species could migrate. Visit, yes. Settle, not yet. Like it, or not, for the moment the Earth is where we make our stand. It has been said that astronomy is a humbling and character-building experience. There is perhaps no better demonstration of the folly of human conceits than this image of our tiny world. To me, it underscores our responsibility to deal more kindly with one another; and to preserve and cherish the Pale Blue dot, the only home, we've ever known." -Carl Sagan
