

Libraries' Guide to Solar System Exploration: *The New Horizons Mission at the Pluto System*

Explore Dwarf Planets and the Solar System in Your Library!

Use the resources below to create a program for your patrons to explore the solar system, including dwarf planets. Search for books in your collection about dwarf planets and/or space exploration. Create a solar system exploration program that fits your library's schedule and needs. Consider fitting solar system exploration into your ongoing programming – lectures for inquisitive adults, family programs, and children's programming. Perhaps design a week-long investigation into the solar system with hands-on activities, demonstrations, and video clips, presentations by solar system researchers from local colleges or universities, and a culminating night-sky viewing event. Alternatively, facilitate an activity for your young patrons to celebrate the New Horizons mission's encounter with the Pluto system and then encourage them to follow the news and explore more on their own!

Why Explore the Solar System?

Interest in the stars and planets has been both a common and consistent characteristic of humanity. We are driven to explore what we don't know, discover new things, push the boundaries of our limits, and beyond. For now, humans must stay close to Earth when exploring space. Until the day humans can routinely visit other planets, we must rely on robotic spacecraft to be our eyes throughout the solar system. Exploring the solar system is not easy and individual missions do not last forever. At some point, all missions must come to an end. However, in the human spirit of exploration, we should always look forward, ready to explore farther.

Exploring the Pluto System with New Horizons

The New Horizons mission will help us understand worlds at the edge of our solar system by performing the first exploration of Pluto and by venturing deeper into the distant, mysterious Kuiper Belt – a relic of solar system formation. Pluto, along with other Kuiper Belt objects and the larger asteroids, is classified as a dwarf planet. More recently, it has been more specifically classified as an ice dwarf. New Horizons launched on January 19, 2006. It will arrive at the Pluto system and conduct a five-month-long study of Pluto and its moons beginning July 14, 2015. As part of an extended mission, the spacecraft is expected to head farther into the Kuiper Belt to examine one or two of the ancient, icy mini-worlds in that vast region, at least a billion miles beyond Neptune's orbit.

Upcoming Events

Find information and resources about upcoming celestial events and NASA mission milestones to share with your patrons at http://www.lpi.usra.edu/education/look_up.

Night Sky Viewing Events

Consider holding a night sky viewing at your library! Viewing planets through telescopes will give your patrons a personal connection with the very same objects being visited by spacecraft. Ask your local astronomical society to bring their telescopes for a viewing. Use the links below to locate a local astronomy club and/or speaker.

Night Sky Network

<http://nightsky.jpl.nasa.gov/clubs-and-events.cfm>

The Night Sky Network is a nationwide coalition of amateur astronomy clubs bringing the science, technology, and inspiration of NASA's missions to the general public.

NASA/JPL Solar System Ambassadors

<http://www2.jpl.nasa.gov/ambassador/directory.htm>

Solar System Ambassadors is a nationwide program consisting of volunteers who communicate the excitement of NASA/JPL's space exploration missions and information about recent discoveries to people in their local communities.

Explore the solar system with hands-on activities!

Strange New Planet

<http://marsed.asu.edu/strange-new-planet>

Grade Level(s): K-8

This activity is about the use of remote sensing in planetary exploration. Learners will find out how human curiosity in planetary exploration results in science questions, engineering solutions, and teamwork.

Other NASA educational activities for exploring the solar system can be found at <http://nasawavelength.org>.
