

# Field Training and Research Program

## San Francisco Volcanic Field

The Field Training and Research Program in the San Francisco Volcanic Field, near Flagstaff, Arizona, is a week-long field class and research project in and around the sites used by the instructor to train astronauts and used by NASA for lunar mission simulations. The goal of the field camp will be to introduce students to basaltic volcanism and physical volcanology in a bimodal volcanic field with a stratovolcano. The program will provide students with an opportunity to assist with a

research project in the volcanic field. Skills developed during field camp should better prepare students for their own thesis studies of volcanic provinces on Earth, the Moon, Mars, or any other Solar System planetary surface where basaltic volcanism has occurred.

This field camp is being organized under the auspices of the NASA Solar System Exploration Research Virtual Institute, which is designed, in part, to train a new generation of explorers for the Moon and beyond.

**Application Deadline:** June 5, 2023  
**Selection Notification Date:** July 5, 2023  
**Field Camp Arrival Date:** September 23, 2023  
**Field Camp Session:** September 24–29, 2023  
**Field Camp Departure Date:** September 30, 2023
