

18 APR 1972

TO: Room 210 Science Support Personnel  
FROM: TD5/Apollo Missions Science Manager  
SUBJECT: Real-Time Support Aids for Apollo 16 Lunar Orbital Experiments and Photographic Tasks

The data enclosures have been prepared for use by science personnel involved in real-time support activities for Apollo 16. If you have any comments concerning them, please submit them directly to me.

  
Richard R. Baldwin/TD5

Enclosures:

- 1 - Apollo 16 Experiment Requirements Summary
- 2 - Apollo 16 Science Activities Timeline Summary
- 3 - Apollo 16 Orbital Science Operation Periods
- 4 - Apollo 16 Lunar Orbital Experiments - Status and Requirements (Wall Display Reductions)
- 5 - Apollo 16 SIM Bay Experiments and Systems - Functional Control Diagram

SCIENCE REQUIREMENTS SUMMARIES

FOR

SIM BAY ORBITAL EXPERIMENTS

AND PHOTOGRAPHIC TASKS

- SM Orbital Photographic Tasks
- CM Photographic Tasks
- Gamma-Ray Spectrometer (S-160)
- X-Ray Fluorescence (S-161)
- Alpha Particle Spectrometer (S-162)
- Mass Spectrometer (S-165)
- UV Photography - Earth and Moon (S-177)
- Bistatic Radar (S-170)

Note:

For constraints, refer to the following documents:  
CSM/LM Spacecraft Operational Data Book, SNA-8-D-027,  
Volume VI, and CSM Experiments Data Book for J-Missions,  
dated September 22, 1970.

## SM ORBITAL PHOTOGRAPHIC TASKS

### 1. OBJECTIVES

- a. Obtain high-resolution panoramic photographs with stereoscopic and monoscopic coverage of the lunar surface (Panoramic Camera).
- b. Obtain high-quality metric photographs of the lunar surface (Mapping Camera).
- c. Obtain data on the altitude of the CSM above the lunar surface (Laser Altimeter).

### 2. DATA COLLECTION

- a. Operate PC during portions of lunar orbit lightside passes per MRD/Table 1; use monoscopic mode within 7 degrees of either terminator. Maximum duration of photographic sequence will be < 30 minutes.
- b. Operate MC over dark and light lunar surface areas per MRD/Table 2. Concurrent LA operation required except for MC oblique passes and post-TEI operation.
- c. There will be periods of independent LA data collection per MRD/Table 3.

CM PHOTOGRAPHIC TASKS

1. OBJECTIVES

Obtain photographs of:

- a. Diffuse galactic light of selected celestial subjects.
- b. Solar corona after CSM sunset and before CSM sunrise.
- c. Zodiacal light.
- d. Specific lunar surface areas in low light levels near the terminator and in earthshine.
- e. Lunar surface areas of prime scientific interest.
- f. Comet, if available.

GAMMA-RAY SPECTROMETER (S-160)

1. OBJECTIVES

- a. From CSM in lunar orbit, measure gamma-ray flux from lunar surface.
- b. While the CSM is in transearth coast, measure the gamma-ray flux of cislunar space, the spectrum of the cosmological gamma-ray flux, the departure from isotropy of the flux along four scan planes, the flux from the galactic anti-center point, and the CSM/SIM radioactivity background flux.
- c. Perform  $\gamma$ -ray astronomy during TEC.

2. DATA COLLECTION

- a. Operate GRS in lunar orbit with boom fully extended for 10 hours minimum (not necessarily continuously) with mapping camera cover closed.
- b. Operate GRS during TEC for 10 hours with boom fully deployed and mapping camera cover closed as soon as practical after TEI. An additional 2 hours of data collection is required with the boom fully deployed and the mapping camera cover opened. It is highly desirable to collect data for 2 hours at each of other boom positions of 0, 2, 4, 6 and 8 feet with the mapping camera cover closed.
- c. Collect  $\gamma$ -ray astronomy data from areas of SCO X-1, CYG X-1 and galactic anti-center point. Perform  $\gamma$ -ray astronomy scans of the ecliptic, supergalactic, supergalactic auxiliary and ecliptic auxiliary planes.
- d. While in lunar orbit, concurrent data collection by the Alpha Particle and X-ray experiments is highly desirable. During  $\gamma$ -ray pointing astronomy, concurrent data collection by the X-ray experiment is highly desirable.

X-RAY FLUORESCENCE (S-161)

1. OBJECTIVES

- a. While the CSM is in lunar orbit, measure the lunar fluorescent X-ray flux and monitor the solar X-ray flux.
- b. While the CSM is in transearth coast, measure the X-ray flux from selected galactic objects and perform a survey of the supergalactic equator.

2. DATA COLLECTION

a. Lunar Orbit:

Collect data for 10 hours minimum with continuous operation for at least 8 hours 10 minutes. Additional data collection during available time is HD.

Maneuver the CSM once during each activity day, if possible, so that sensor is oriented toward deep space at an angle of 135° - 180° with respect to nadir.

Concurrent operation of this experiment and GRS and APS experiments is HD.

b. TEC:

Collect data for 2 hours from each of two galactic objects: SCO X-1 and CYG X-1.

Additional data collection up to 4 hours is HD. Data collection on a different day from SCO X-1 is also HD.

ALPHA PARTICLE SPECTROMETER (S-162)

1. OBJECTIVE

- a. While the CSM is in lunar orbit, obtain data on lunar surface alpha particle emission from  $RN^{222}$ ,  $RN^{220}$ , and their daughter products.

2. DATA COLLECTION

a. Lunar Orbit:

Collect data for 10 hours minimum. Additional data collection during available time is HD.

Maneuver CSM once during each activity day, if possible, so that sensor is oriented toward deep space at an angle of  $135^\circ - 180^\circ$  with respect to nadir.

b. TEC:

Collection of data concurrent with X-ray and  $\gamma$ -ray experiments is HD.

MASS SPECTROMETER (S-165)

1. OBJECTIVES

- a. While the CSM is in lunar orbit, obtain data to (1) determine the natural distribution of gases in the lunar atmosphere, (2) locate areas of possible lunar volcanism, and (3) determine the amount of lunar atmospheric contamination due to rocket firing near the lunar surface and due to the spacecraft.
- b. While the CSM is in lunar orbit and during transearth coast, obtain data on the amount of contamination due to the spacecraft.

2. DATA COLLECTION

- a. 60 x 9 NM Orbit: Outgas for 1 hour continuously, followed by data collection for 5 minutes in each of 4 possible combinations of MULT and DSCRM switch positions, and with CSM in either -X axis or +X axis orientation.

Collect data during 2 complete, consecutive revolutions with CSM in -X axis orientation and MULT and DSCRM switches in LO-LO positions.

Additional data collection HD in both -X axis and +X axis orientation.

- b. 60 x 60 NM Orbit: Outgas continuously for 30 minutes followed by data collection for one complete revolution with CSM in -X axis orientation.

Outgas continuously for 4 hours followed by data collection for two complete revolutions with CSM in -X axis orientation.

After each plane change outgas continuously for 30 minutes and collect data for two complete consecutive revolutions with CSM in -X axis orientation; additional data collection in both -X axis and +X axis orientation is HD.

After a sleep cycle, outgas for 10 minutes and collect data for at least 30 minutes with spacecraft remaining in the -X orientation.

It is highly desirable during each revolution to collect data from a lunar surface area extending  $\pm 15$  degrees longitude on each side of the sunset and sunrise terminators.

Collect data for 5 minutes at each of 4 boom retracted positions (19, 14, 9, and 4 ft) with CSM in -X axis orientation, and for 1/2 revolution with boom at 12 ft.

Collect data with boom fully extended during a water dump and fuel cell purge.

c. TEC:

Outgas for 30 minutes within 1 hour after TEI; then collect data for 1 hour minimum.

Collect data for 25 minutes minimum at each of 4 boom retracted positions (19, 14, 9, and 4 ft), and for 25 minutes with boom fully retracted.

Collect data for 25 minutes with the boom fully retracted.

Collect data during a water dump and a fuel cell purge with boom fully extended; and for a 2-minute period during a fuel cell oxygen purge when the boom is fully extended, at 12 ft, and at 6 ft.

Collect data for 30 minutes before and after RCS jets A2, B4, C1, and D4 have been fired in pairs for about 1 second and the experiment outgassed for 10 minutes.

UV PHOTOGRAPHY - EARTH AND MOON (S-177)

1. OBJECTIVE

- a. Obtain photographs of the earth and the lunar surface in three UV and one visual region of the spectrum.

2. DATA COLLECTION

- a. Fifty-two photographs are required (13 sets, 4 photographs per set; and an additional fifty-two are highly desirable. Each set contains one photograph with each of 4 filters. One color photograph in each set is HD.

BISTATIC RADAR (S-170)

1. OBJECTIVES

- a. Obtain data in the S-Band and in the VHF band to allow determination of geological structure and electrical characteristics of the lunar crust.
- b. Obtain data in the S-band and in the VHF band over the same lunar surface track to allow determination of geological structure and electrical characteristics of the lunar crust.

2. DATA COLLECTION

a. S-Band or VHF Band:

Collect data for one-half frontside pass minimum for S-band, and another one-half frontside pass for VHF band.

Additional data from lunar frontside passes are HD.

b. S-Band and VHF Band:

Collect both S-Band and VHF data over the same ground track for a minimum of one-half frontside pass.

Additional data from lunar frontside passes are HD.

## APOLLO 16 MISSION/SCIENCE EVENT SCHEDULE SUMMARY

| MISSION/SCIENCE EVENT                          | DATE/DAY    | REV | SCHEDULED G.E.T. |       | ACTUAL G.E.T. |      | TOTAL TIME (HRS) |
