UNIT I

PROGRAM ABSTRACT AND HISTORY OF USE

A. ABSTRACT

ALSEPPI is a program used to format Principal Investigator (PI) tapes for various experiments on the CDC 3200 computer from ALSEP data stored on the 821 disk file or from an Other Data (OD) tape if data is not available on the disk.

B. PROGRAM HISTORY

ALSEPPI was written in 3200 COMPASS for the CDC 3200 Real-Time Scope at the NASA DRC Telemetry Systems by Rodolfo M. Rodriguez, Lockheed Electronics Company, Inc., Houston, Texas, in July, 1972. It was updated for Apollo 17 in September, 1972. ALSEPPI will be a part of the ALSEP data processing packages on the CDC 3200 computer.

UNIT II

PROGRAM USERS INFORMATION

A. IDENTIFICATION

Title:	ALSEPPI
Author:	Rodolfo M. Rodriguez
Date:	October 1972
Installation:	MSC, Houston, Texas
Authorization:	Contract Number NAS 9-12200
Source Language:	CDC 3200 COMPASS
Computer Configuration:	CDC 3200

B. DESCRIPTION OF PROGRAM REQUEST

See attachment 8, Correspondence.

C. USAGE

1. Input Data Descriptions:

   See attachment 6.

2. Lead Card Setup:

   See attachment 1.

3. Deck Setup:

   See attachment 2.

4. Tape Assignments:

   See attachment 3, Run Request Card.

5. Restrictions:

   None

6. Diagnostic Messages:

   See attachment 9.

7. Labels, Save-Tapes, Output Disposition:

   Save labels are required for all output tapes.
   Printer output should be sent to requester.

8. Output Formats:

   See attachment 7.

9. Nonstandard System Requirements:

   821 disk file
   Four tape units

10. Running Time:

    Four to 6 minutes per 1 day of data

D. ANALYSIS

ALSEPPI is designed to format Principal Investigator (PI) tapes from ALSEP data stored on the 821 disk file or from tape if the data is not available on the 821 disk. The program reads all the lead cards, selects the labels, and writes the labels on the output tapes. The lead card information is used to select the experiments, the days, and the mission to be processed. The ALSEP data is read from the 821 disk file in a double buffer operation. The first buffer is processed while the next is being read in.

Up to three experiments can be selected for each day of data to be output on individual PI digital tapes.

ALSEPPI expects the input data to be stored in the 821 disk file. As much as 45 days of ALSEP data can be stored on the OD area of the disk. The directory containing the address and mission number of the data indexed by day is read in, and a search is made for the address on the disk of data for the day and mission to be processed. If the data is not on the disk, the program will request the input data on tape unit 1. The output is written on tape unit 2, 3, or 4.

A tape for each experiment of the first day requested will be selected using tape 2 first, then 3 and 4 as needed. Two label records will be written on each tape. The experiment code and tape number are printed on the typewriter to indicate which experiments are active and on what unit. The program runs without operator control and will stop at the end of operation or at an error (in which case an error message will appear). In some cases, the problem may be corrected and the program can continue by pushing GO, if desired. The program continues to the end-of-job where it stops with the message "JOB COMPLETED...ALSEPPI" on the typewriter. A message showing status at the end of each day processed or each tape completion is printed on the printer. This printer output is returned to the requester. Tapes that are rewound and selected are saved using labels attached to the request sheet.

The program is capable of generating at least nine different experiment (PI) tapes which are selected by lead card information. These experiments are grouped in different combinations for each Apollo mission. Each can have different durations of 2-, 3-, or 4-day periods. A table of the experiments for each mission, duration limits, and a recommended setup for each group to eliminate having to change the tapes hurriedly is attached. There also are times when only one day of data is required.

A day termination option is available by setting sense switch 2 to ON. The program will terminate the experiments being processed at the end of the day. This option may be used to terminate on any day of the processing cycle in case the next day is not available or desired. A message is written on the typewriter at the end of each day.

Two other sense switch options are available. Sense switch 1 will obtain a core dump at the end of the job; sense switch 3 will stop typing the mode error messages on the typewriter. Mode error messages are data induced on the CCGE experiment, and after a trend has been established the operator may wish to discontinue the typing.

The program maintains data quality by checking data status, time status, tape parity errors, and disk errors. The data status word and the time status word are checked during every scan. No scan is accepted unless both the data and the time status are 5 or greater. Parity errors on the

ALSEP DATA PROCESSING GROUPS

Mission Number	Experiment	Duration in Days
12	CCGE	4

* Three-day experiment will have to catch up for the one-day slip every run.

NOTE: This is only a recommended grouping. If possible, a more efficient method or group should be used to adjust to operating conditions.

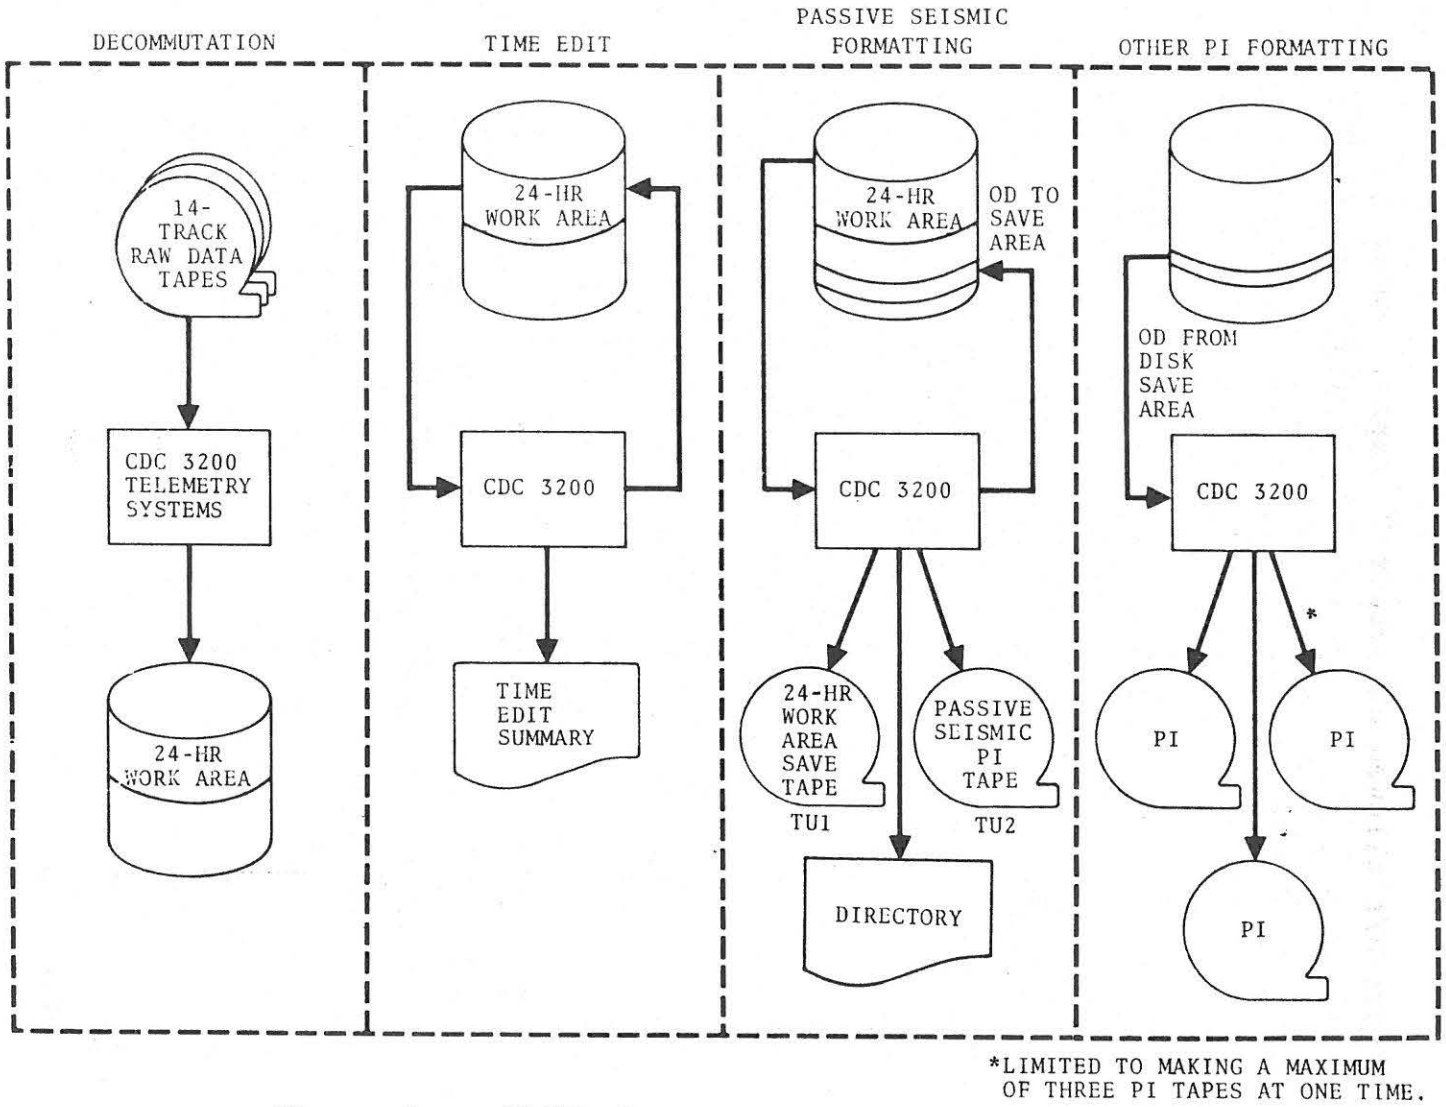

Figure 1. – ALSEP data processing flow chart.

input tape are reread nine times before tagging them as parity records. Flagged parity records are not processed.

No parity errors are allowed on output PI tapes. On a parity error indication, the tape is backspaced, the bad spot is skipped, and the record is rewritten.

OUTPUT FORMATS

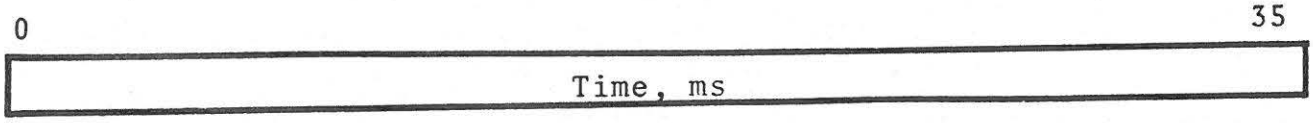
Heat Flow Experiment Digital Tape Description

I. Label Record (appears twice on tape)

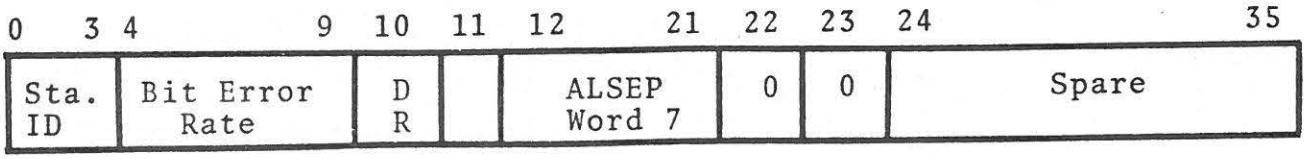
Word	Parameter
1	Experiment Identification (HEATFL)
2	ALSEP Number (ALSP 17)
3	Mission Identification (A/S512)
4	Year data Acquired (BB1973)

II. Data Record Format, 3 Words/Logical Record

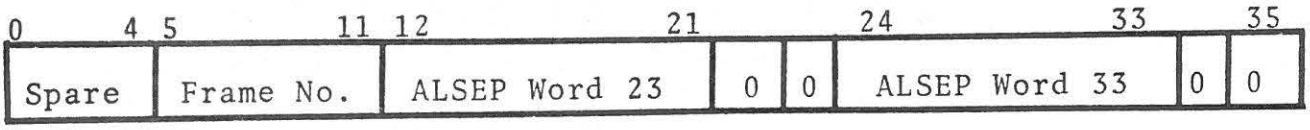
Word 1:



Word 2 – station ID, bit error rate, data rate, command verification:



Word 3 – ALSEP frame number, ALSEP words 23, 33:



180 logical records/physical record

Finish filling last record of data with zeros; last record filled with octal 1's followed by EOF. Binary tape, 800 bpi, seven-track, standard IBM EOF.

NOTE: Word 23 is valid on frames 0-15; word 33 is invalid. Word 33 is valid on frames 29, 45, 55, 57, 74, and 75; word 23 is invalid. All other frames are omitted.

Label records and data records written in binary.

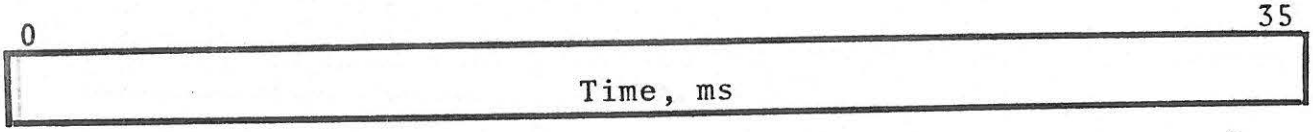
Lunar Ejecta and Meteorite Experiment Digital Tape Description

I. Label Record (appears twice on tape)

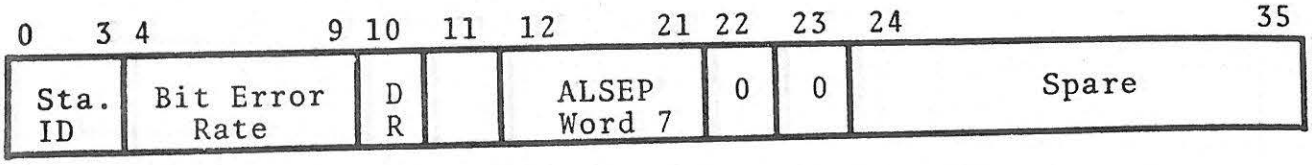
Word	Parameter
1	Experiment Identification (LEAMEX)
2	ALSEP Number (ALSP 17)
3	Mission Identification (A/S512)
4	Year data Acquired (BB1973)

II. Data Record Format, ~~3~~ 4 Words/Logical Record

Word 1:



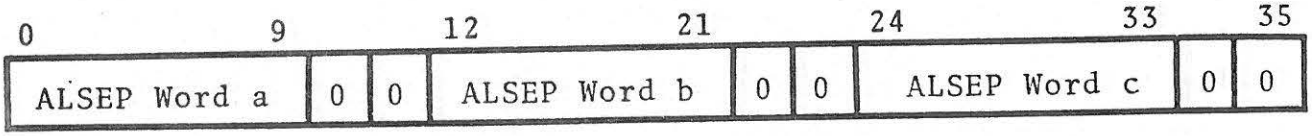
Word 2 – station ID, bit error rate, data rate, command verification:



Word 3 – ALSEP words 1, 2, 3

Word 4 – ALSEP words 31, 33, 39

Packed IBM word format for ALSEP words:



90 logical records/physical record

Finish filling last record of data with zeros; last record on tape filled with octal 1's followed by EOF.

Binary tape, 800 bpi, seven-track, standard IBM EOF.

Label records and data records written in binary.

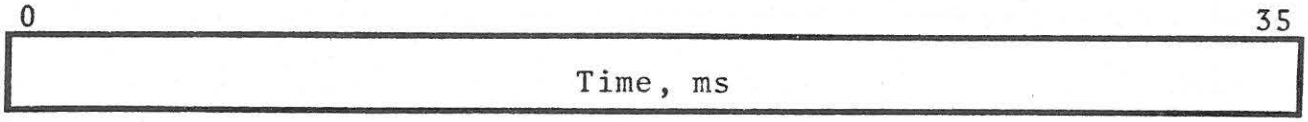
Lunar Mass Spectrometer Experiment Digital Tape Description

I. Label Record (appears twice on tape)

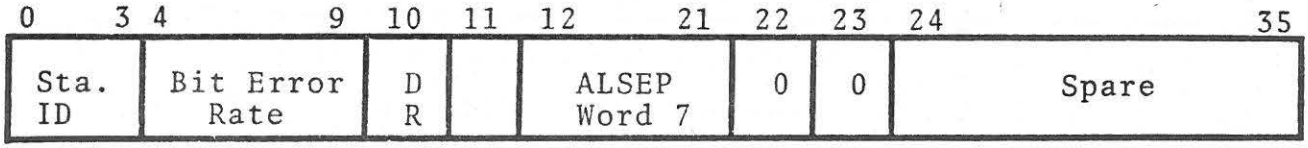
Word	Parameter
1	Experiment Identification (LMSEXP)
2	ALSEP Number (ALSP 17)
3	Mission Identification (A/S512)
4	Year data Acquired (BB1973)

II. Data Record Format, 5 Words/Logical

Word 1:



Word 2 – station ID, bit error rate, data rate, command verification:

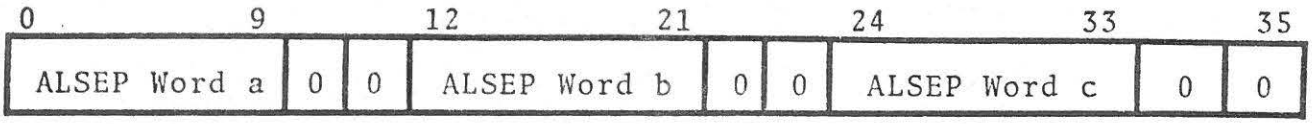


Word 3 – ALSEP words 1, 2, 3

Word 4 – ALSEP words 5, 17, 19

Word 5 – ALSEP words 21, 33, b

Packed IBM word format for ALSEP WORDS:



90 logical records/physical record

Finish filling last record of data with zeros; last record on tape filled with octal 1's followed by EOF.

Binary tape, 800 bpi, seven-track, standard IBM EOF.

Label records and data records written in binary.

Engineering and Housekeeping Data Digital Tape Description

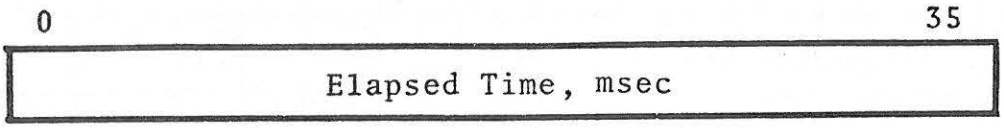
The engineering data consists of housekeeping measurements from the ALSEP system. This data appears once each ALSEP frame. The engineering word recycles every 90 frames.

I. Label Record (appears twice on tape)

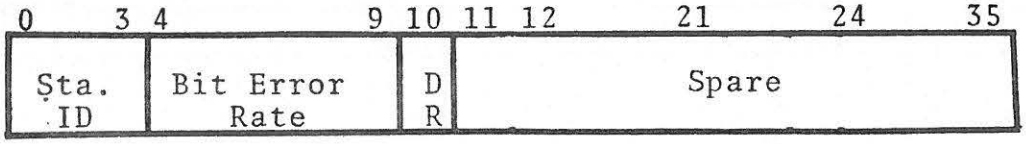
Word	Parameter	Mode
1	Experiment Identification (ENGRNG)	BCD
2	ALSEP Number (ALSEPX)	BCD
3	Mission Identification (A/Sxxx)	BCD
4	Spare	BCD

II. Data Record Format, 4 Words/Logical Record

Word 1:



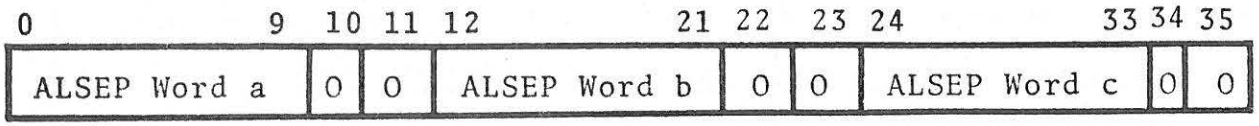
Word 2 - station ID, bit error rate, data rate (1 = 1060 bps; 0 = 530 bps):



Word 3 - words 1, 2, 3 of each ALSEP frame

Word 4 - words 33 and 7 of each ALSEP frame

Packed IBM word format for ALSEP data words:



180 logical records/physical record

Finish filling last record of data with zeros; last record filled with octal 1's followed by EOF. Binary tape, 800 bpi, seven-track, standard IBM EOF.

Label records and data records written in binary.

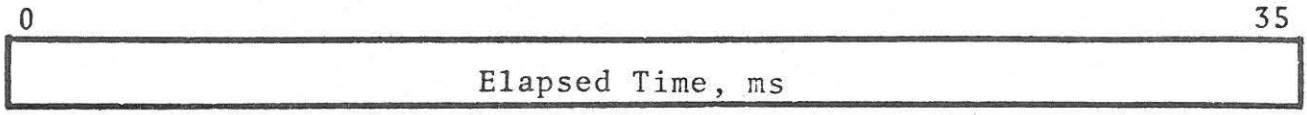
Lunar Surface Magnetometer Digital Tape Description

I. Label Record (appears twice on tape)

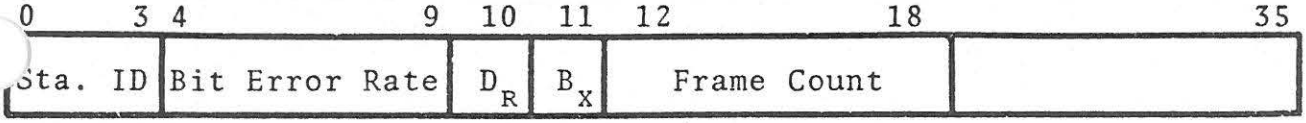
Word	Parameter	Mode
1	Experiment Identification (MAGEXP)	BCD
2	ALSEP Number (ALSEPX)	BCD
3	Mission Identification (A/Sxxx)	BCD
4	Spare	BCD

II. Data Record Format, 4 Words/Logical Record

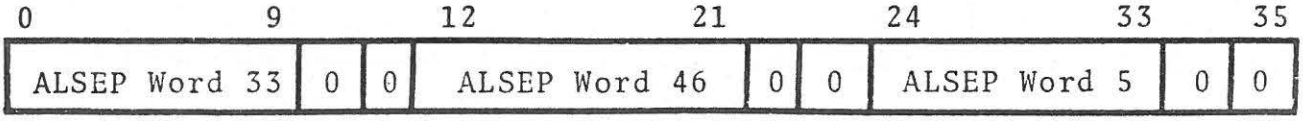
Word 1:



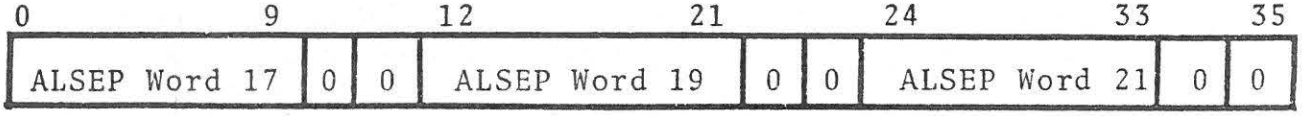
Word 2:



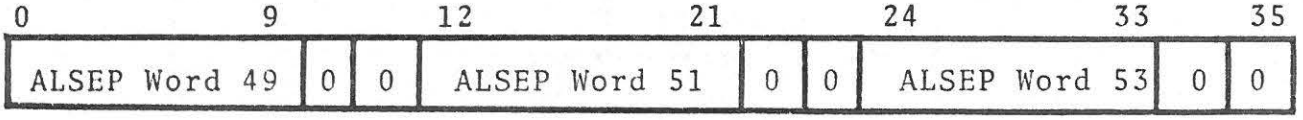
Word 3:



Word 4:



Word 5:



90 logical records/physical record

Finish filling last record of data with zeros; last record filled with all 1's followed by EOF. Binary tape, 800 bpi, seven-track, standard IBM EOF.

Frame marker 1 for first ALSEP frame counter 1; 0 for all others.

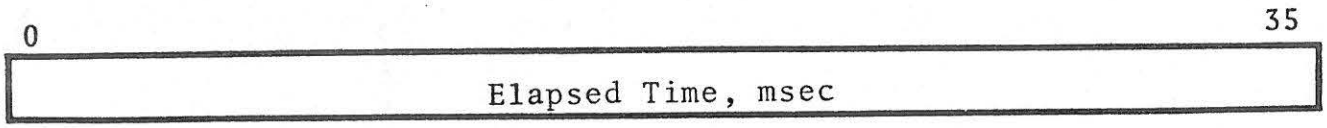
Solar Wind Spectrometer Digital Tape Description

I. Label Record (appears twice on tape)

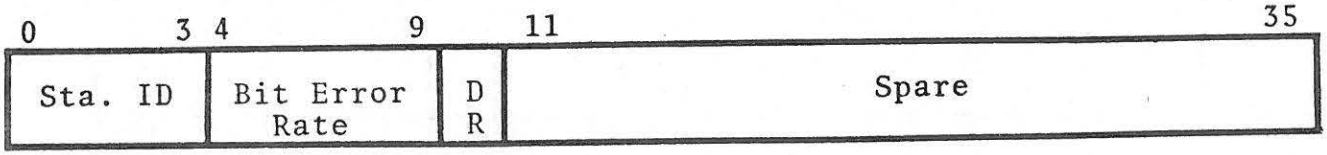
Word	Parameter	Mode
1	Experiment Identification (SOLWDS)	BCD
2	LSEP Number (ALSEPX)	BCD
3	Mission Identification (A/Sxxx)	BCD
4	Spare	BCD

II. Data Record Format, 5 Words/Logical Record

Word 1:



Word 2 – station ID, bit error rate, data rate (1 = 1060 bps; 0 = 530 bps):

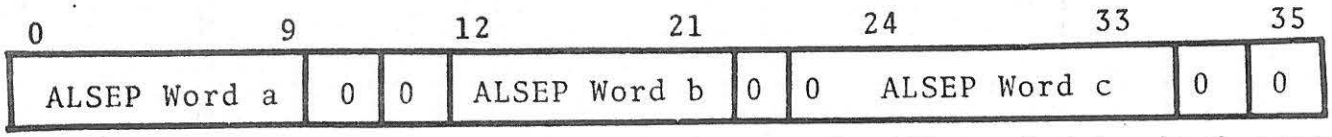


Word 3 – words 1, 2, 3 of each ALSEP frame

Word 4 – words 33, 7, 23 of each ALSEP frame

Word 5 – words 46, 39, 55 of each ALSEP frame

Packed IBM word format for ALSEP data words:



88 logical records/physical record; 440 words/physical record

Finish filling last record of data with zeros; last record filled with all 1's followed by EOF. Binary tape, 800 bpi, seven-track, standard IBM EOF.

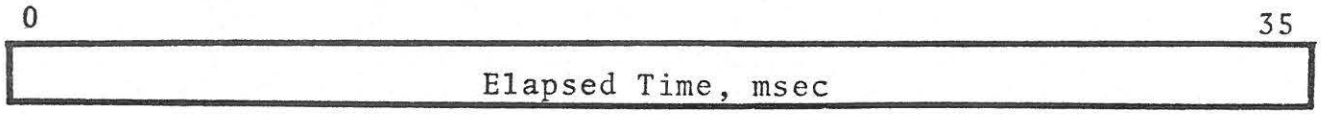
Suprathermal Ion Detector Digital Tape Description

I. Label Record (appears twice on tape)

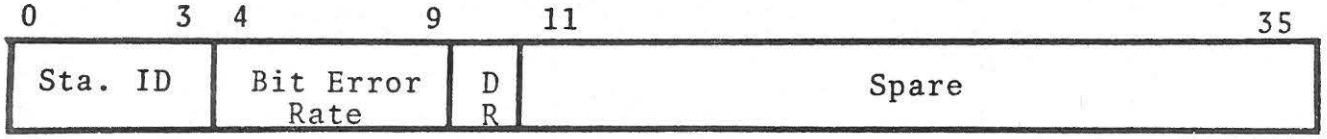
Word	Parameter	Mode
1	Experiment Identification (SIDE)	BCD
2	ALSEP Number (ALSEPX)	BCD
3	Mission Identification (A/Sxxx)	BCD
4	Spare	BCD

II. Data Record Format, 6 Words/Logical Record

Word 1:



Word 2 – station ID, bit error rate, data rate (1 = 1060 bps; 0 = 530 bps):



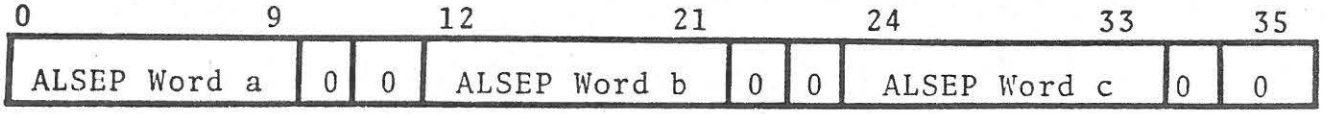
Word 3 – words 1, 2, 3 of each ALSEP frame

Word 4 – words 15, 31, 33 of each ALSEP frame

Word 5 – words 46, 47, 56 of each ALSEP frame

Word 6 – word 63 of each ALSEP frame

Packed IBM word format for ALSEP data words:



90 logical records/physical record

Finish filling last record of data with zeros; last record filled with all 1's followed by EOF. Binary tape, 556 bpi, seven-track, standard IBM EOF.

Cold Cathode Ion Gage Digital Tape Description

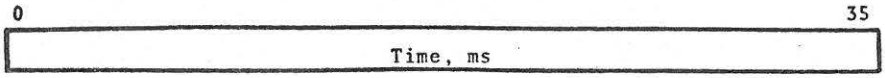
Non-FORTRAN Binary Tape (36 Bits per Word)

I. Master Header Record (appears twice on tape)

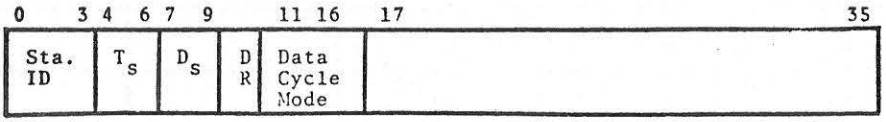
Word	Contents	Mode
1	Experiment Name (CCGEbb)	BCD
2	ALSEP Number (ALSEPX)	BCD
3	Spacecraft ID (A/Sxxx)	BCD
4	Date Tape Was Generated (YRMODY)	BCD

II. Data Record

Word 1:

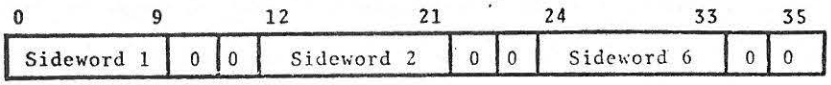


Word 2:



Bits 0-3: Station ID
Bits 4-6: Time sync quality code (7 = best; 0 = worst)
Bits 7-9: Data sync quality code (7 = best; 0 = worst)
Bit 10: Data rate (1 = 1060 bps; 0 = 530 bps)
Bits 11-16: Data cycle mode
Bits 17-35: Spare (will be zeros)

Word 3:



Bits 0-11: Sideword 1 as follows:
- Bit 0: Parity bit for the previous frame
- Bits 1-2: Two zero bits for even frame sync (frame sync bits)
- Bits 3-9: Contents of SIDE frame counter
- Bits 10-11: Will always be zeros

Bits 12-23: Sideword 2 as follows:
- Bits 12-13: Will always be zeros
- Bits 14-21: CCGE data
- Bits 22-23: Will always be zeros

Bits 24-35: Sideword 6 as follows:
- Bit 24: Parity bit for the previous frame
- Bits 25-26: Two 1 bits for odd frame sync (frame sync bits)
- Bit 27: Will always be zero
- Bits 28-33: CCGE data
- Bits 34-35: Will always be zeros

Words 1-3 will repeat 90 times within a record to produce a 270-word record. Incomplete records will have the remaining portion filled with zeros. The last record on tape will contain all 1's (001 bit configuration) followed by an end-of-file mark.

800 bps, seven-track, standard IBM EOF.

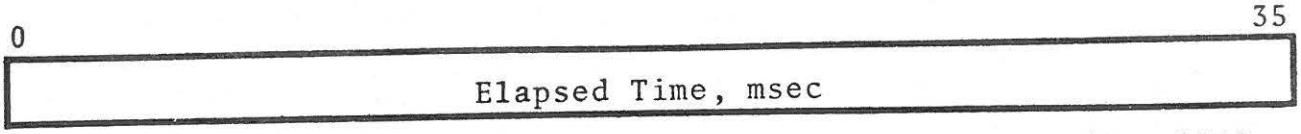
Charged Particle Digital Tape Description[1]

I. Label Record (appears twice on tape)

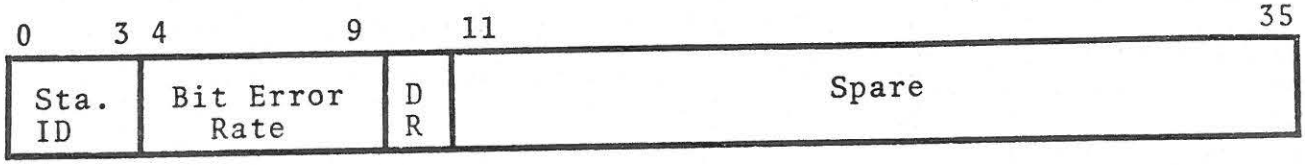
Word	Parameter	Mode
1	Experiment Identification (CPLSPE)	BCD
2	ALSEP Number (ALSEPX)	BCD
3	Mission Identification (A/Sxxx)	BCD
4	Spare	BCD

II. Data Record Format, 6 Words/Record

Word 1:



Word 2 – station ID, bit error rate, data rate (1 = 1060 bps; 0 = 530 bps):



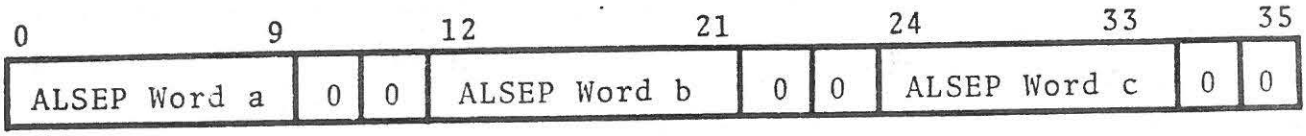
Word 3 – ALSEP words 1, 2, 3

Word 4 – ALSEP words 7, 17, 19

Word 5 – ALSEP words 23, 39, 55

Word 6 – ALSEP words 33, 5

Packed IBM word format for ALSEP data words:



90 logical records/physical record

Finish filling last record of data with zeros; last record filled with all 1's followed by EOF. Binary tape, 556 bpi, seven-track, standard IBM EOF.

Subject: Implementation Plan for Disk ALSEP

The Program Document for the proposed ALSEP Data Processing System on the CDC 3200 computer has been reviewed. This proposed system for processing ALSEP data on the CDC 3200 computer using the 821 disk file as a mass storage device has been approved.

The contractor is requested to analyze and prepare a schedule; including all major milestones, for implementing this proposed system. Since the system consists of several different functions or programs to be written this implementation schedule should indicate completion dates for each separate function.

Any questions concerning this request should be directed to the NASA Technical Submonitor, Don McCormick, FD56, extension 5548. All work done on this request should be charged to project No. 8048S.

TO: FD5/Chief, Data Processing Branch

FROM: LEC/Manager, Data Processing Department

SUBJECT: Technical Memorandum 71-FD56-302, Implementation Plan for Disk ALSEP

Subject Technical Memorandum was received by the Data Processing Department on December 3, 1971.

Overall responsibility for the Disk ALSEP implementation has been assigned to Cliff Hutchinson of the Telemetry and Special Applications Section. It is anticipated that the actual implementation will involve a dual NASA-LEC programming effort. Details will be worked out with Mr. McCormick and will be considered in the implementation plan. This plan will be completed and presented for your review on December 20, 1971.

Please direct any additional communications regarding this task to Mr. Hutchinson, 333-4990.

As directed, all work done on this project will be charged to project number 8048S.

TO: FD5/Chief, Data Processing Branch

FROM: LEC/Manager, Data Processing Department

SUBJECT: Technical Memorandum 71-FD56-302 & DPD#0467, Implementation Plan for Disk ALSEP

As specified in the subject documents, attached hereto is the completed implementation plan for your approval. If no reply to this memorandum is received by December 29, 1971, it will be assumed to be accepted as is.

Due to the time line established, design work will begin immediately.

Implementation Plan for ALSEP Processing on CDC 3200

Implementation of the ALSEP data processing system on the CDC 3200 computer will be a joint LEC-NASA venture which will require the full-time effort of four individuals for approximately four months. The following individuals will make up the team responsible for implementing the processing package:

Don McCormick/NASA
Margo Hernandez/LEC
Cliff Hutchinson/LEC
Rudy Rodriguez/LEC

Mr. Hutchinson will be the LEC project leader. Mr. McCormick will be the NASA monitor, but will also have programming responsibilities.

The ALSEP data processing system will consist of four main program types and three supplemental programs. The main program types and the individuals responsible for writing them are:

Decommutation	Margo Hernandez
Time Edit (TE)	Cliff Hutchinson
Passive Seismic	Don McCormick
Format PI Tapes	Rudy Rodriguez

Mr. Hernandez will also be responsible for writing the supplemental programs for (1) updating the directory, (2) deleting records on the disk, and (3) a tape-to-disk write routine.

Figure 1 is a bar chart which depicts the proposed implementation schedule. April 30 has been established as a target date for completion of the overall project. Each main program is broken down into an analysis, coding, and checkout phase. A design review meeting will be held for each program prior to the beginning of actual coding to review detailed flow charts in order to better coordinate individual efforts.

It is planned to have all of the individual programs coded and most of them checked out prior to the Apollo 16 mission. After the mission, checkout will be completed on the remaining programs. The programs will be integrated into one processing system, and the system validated as one package.

Table I is a chronological list of events and milestones scheduled for the implementation phase. Since there are four major programs involved in the project, as each one is completely checked out by itself, that will be considered a major milestone.

Since the new system on the CDC 3200 is intended to replace the current UNIVAC 1108 system, it is mandatory that the new system be completely checked out and validated prior to complete conversion. Since the final output for the present and new ALSEP processing systems will be identical, basic validation will consist of comparing final output from both systems run over the same 96-hour ALSEP data period. The comparison will be made for each ALSEP package. The existing UNIVAC 1108 data quality check routines will also be run over both sets of data to additionally verify that both systems yield identical results.

TABLE I

DATE	MILESTONE	EVENT
January 12	(1)	Design review meeting for Decom and Passive programs
January 14		Analysis complete on Decom
January 19	(2)	Design review for T.E. and P.I.
January 21		Analysis complete on Passive Seismic and P.I.
January 28		Coding complete on Decom
January 28		Analysis complete on T.E.
February 11	(3)	Checkout complete on Decom
February 18		Coding complete on Passive & P.I.
February 18		Coding complete on Directory updat
February 25		Coding complete on T.E.
February 25		Checkout complete on Directory upd
March 9		Coding complete on Restore routine
March 17	(4)	Checkout complete on Passive Seismic and P.I.
March 17-April 7		Support Apollo 16 Mission
April 10	(5)	Completion of supplemental progra
April 17	(6)	Checkout complete on Time-Edit
April 30	(7)	Complete integration & validation of system

TO J. D. Garrett DEPT./ORGN. 628-10 BLDG./ZONE LEC-8 PLANT/FAC. HASD DATE 6/28/72

FROM K. J. Langenberg DEPT./ORGN. 628-60 BLDG./ZONE 12 PLANT/FAC. HASD EXT. 3395

SUBJECT: Packing Density for DISK ALSEP Tapes

All scientific data tapes prepared for the ALSEP Principal Investigators using the DISK ALSEP processing system should be written at 800 bits per inch.

The one exception will be tapes created from the Charged Particle Lunar Environment Experiment (CPLEE). These tapes will be 556. It should be noted that these tapes are created on special request only, and are not part of the normal ALSEP processing task.

Any questions regarding this requirement should be directed to Jack Howell at 483-3395.

SUBJECT: IDC 72-SRS-079, Packing Density for Disk ALSEP Tapes

Subject memorandum was received on July 3, 1972.

Rudy Rodriguez has been assigned responsibility for the programming support for the program ALSEPPI. This program has been modified to output the PI tape for the Charged Particle Experiment (CPLEE) at 556 BPI as requested. This change is included in the program currently being validated.

Work on this task has been charged to project number 8048A. Questions related to this task should be directed to Rudy at 333-4875, extension 116, or Cliff Hutchinson, extension 115.

FROM	A. J. Zwolinski	628-60	12	LEC/HASD	EXT. 3395

SUBJECT: Data Processing Support Requirements for the Apollo Lunar Surface Experiments Package (ALSEP)

The Computation and Analysis Division has the requirement to provide data processing support for the ALSEP on Apollo 17. This task will begin when the package is deployed and activated, by the crew, in December 1972.

With the exception of the Heat Flow Experiment, this ALSEP contains a new complement of experiments. Software must be developed to decommutate data from SIDE analog tapes, and create individual digital tapes for each Principal Investigator.

Included as an attachment to this memorandum is a Data Processing Requirements document for the Apollo 17 ALSEP. This document contains the necessary information for all the scheduled experiments except the Lunar Seismic Profiler experiment. Processing requirements for this experiment are being finalized, and will be documented and released as appendices to the original requirements document.

All efforts expended on this task should be charged to project number 8048, and it's completion is requested prior to October 2, 1972. Questions regarding these requirements should be directed to Jack Howell at 483-3395.
