

Figure 1a,b: Photo of dust-covered 15306. Sample is 7 cm across. S71-43064 and 067.

Introduction

15306 is a regolith breccia collected as part of a large soil (15300) and rake sample (15310) at Spur Crater. 15315, 15324, 15325 and 15330 are additional large soil breccias from the same rake sample, and there are many smaller fragments from the same sample (Butler 1972; Ryder and Sherman 1989). They all contain green glass spheres, distinctive of the soil and breccias samples at Spur Crater.

Petrography

15306 was selected by Fruland (1985) as one of the “regolith breccias” for the study by Simon et al. (1986) and McKay et al. (1989). The other samples in this group show the variability among regolith breccias.

Figure 4: Photo of 15325. Sample is 4 cm. S76-26843.

15306 – 134.2 grams

15315 – 35.6 g

15324 – 32.3 g

15325 – 57.8 g

15330 – 57.8 g

Regolith Breccia

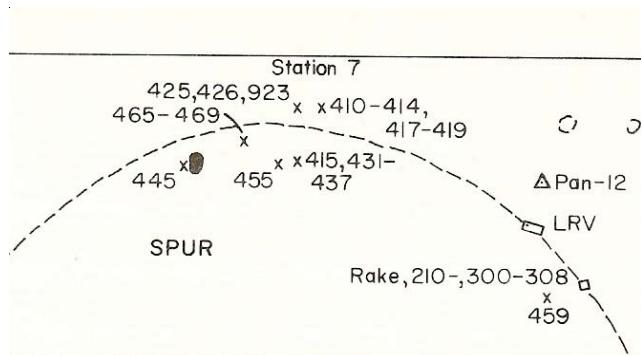

Figure 7: Map of station 7, Apollo 15

Thin section photomicrographs of these samples can be found in the catalog by Ryder (1985).

Best and Minkin (1972) reported on glass composition in 15306. McKay et al. (1989) found 15306 to be "subporous" with density = 2.34 gm/cm³. They also reported a high percentage of mare basalt.

Dowty et al. (1973) and Hlava et al. (1973) found that 15315 had a high proportion of mafic green glass.

15324 is friable and full of glass (figure 3).

15325 had a glass coating on one side (figure 4).

15330 (figure 5) had micrometeorite pits on all sides and was coherent.

Warren and Wasson (1980) studied two clasts from 15306. One was pristine and Ta-rich (Warren 1993). Mineral compositions are given in figure 11.

Chemistry

Simon et al. (1986), Taylor et al. (1973), and Wanke et al. (1976) reported analyses for these soil breccias. They are not as enriched in REE as other regolith breccias from this site (figure 9).

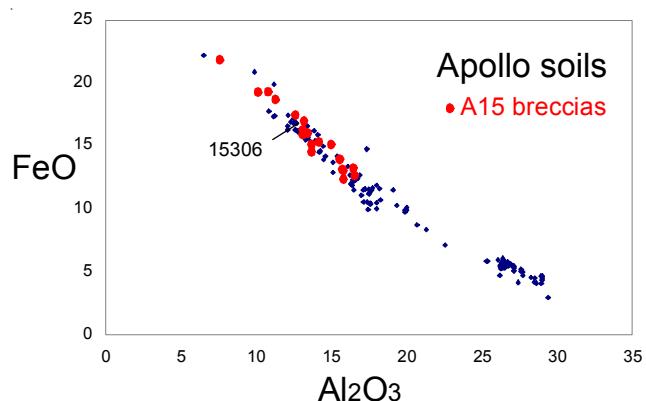

Figure 8: Composition of 15306 in comparison to that of Apollo 15 breccias and Apollo soils.

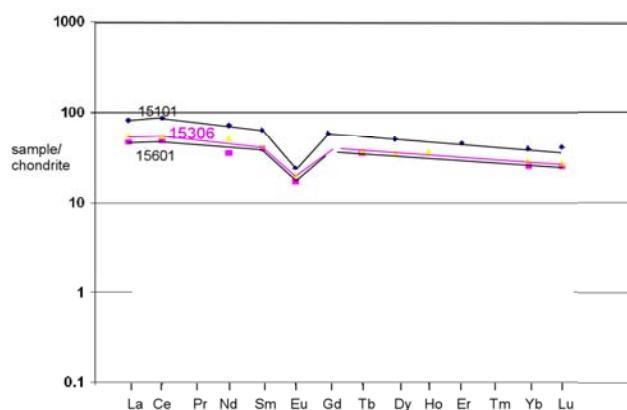

Figure 9: Normalized rare-earth-element diagram for 15306 and selected Apollo 15 soils, for comparison.

Mode for 15306 (Simon et al. 1986)

| | | |
|------------------|--------------|----------------|
| Matrix | <20 micron | 56.9 % |
| | 20-90 micron | 90-1000 micron |
| Mare basalt | - | 1.6 % |
