67626
Impact melt Breccia
19.2 grams

Figure 1: Photo of 67626. Sample is about 4 cm long. S72-51267

Introduction
67626 is one of many rake samples collected from the inside rim of North Ray Crater, Apollo 16 - see section on 67600. It is an ugly piece of glass.

Petrography
Stöffler et al. (1985) listed 67626 as a “partly devitrified glass bomb”. It has not been studied.

Chemistry
none

Radiogenic age dating
none
