The Association of Venusian Polygonal Impact Craters with Surrounding Tectonic Structures [#2137]

The results of this study indicate that the crater formation process on Venus reflects the existing planes of weakness and/or fractures in the target material.

Comparative Analysis of Topography of the Venusian Rifts and Terrestrial Continental Rifts in Africa [#1063]

The width of venusian rifts in the Atla and Beta-Phoebe regions is about two times larger than rifts in Eastern Africa.
