GLOBE BASEMAPS

- Uses combined *Galileo-Voyager* mosaics produced by the USGS
- Includes named surface features, lat-long grids
- Flower petal images for 9” globes are completed for Europa (500 m/px), Ganymede (1 km/px), and Callisto (1 km/px)
- Io requires some “finish work” – J. Blue

Original Plan

- **Sky Publishing would produce using Replogle Globes (J. Kelly Beatty, contact)**
- **Sell as a set of four 9-inch globes for ~\$300/set**
- **Sky needed \$60,000 from NASA as guarantee to produce 300 sets**
- **NASA doesn't have \$60K for such a purpose**
- **About 70 community members indicated they were interested in getting 1 or more sets**

Current Status

- **I contacted Replogle Globes directly**
- **They will provide some cost estimates:**

- ✧ **Awaiting to hear from them!**

- **Other options suggested by USGS:**

- ✧ **Obtain another private sector coordinator: Astronomy magazine, Planetary Society, Astron. Soc. of the Pacific**

- ✧ **Others?**
