The R&A restructure has been a focus of attention. I compiled your comments last fall and communicated that list to NASA HQ. I have been assured that every comment has been read, even if it seems like we are not getting direct feedback.

One incredibly important concern has been resolved: the due date for Solar System Workings has been moved up to July 25, 2014.

I urge you to read the new calls and FAQ, posted at http://www.lpi.usra.edu/PSD-RandA/

Community comment is still welcome – direct your comments to Candy Hansen, cjhansen@psi.edu and I will compile them and send them on. Alternatively you can email Jonathan Rall.

The Planetary Photogrammetry Guest Facility at the Astrogeology Science Center of the U.S. Geological Survey would like to announce a Call for Participation for a training opportunity on April 29 - May 1, 2014, on Photogrammetric Processing of Planetary Stereo Imagery using SOCET SET®. **The training is free to participants,** and will cover end-to-end, hands-on photogrammetric procedures for surface extraction from Mars Reconnaissance Orbiter HiRISE image pairs. The topics include

- ***An introduction to photogrammetric procedures and surface generation techniques;***
- ***Overview of HiRISE imagery; and***
- ***Workflow and data exchange between ISIS and SOCET SET.***

More information is attached.
