

# Asteroid Redirect Mission and Human Exploration

**Michele Gates**

Human Exploration and Operations Mission Directorate

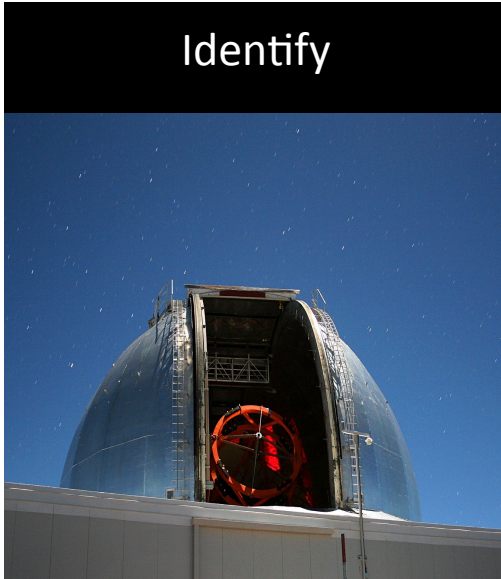

# Leveraging Capabilities for an Asteroid Mission

- **NASA is aligning key activities in Science, Space Technology, and Human Exploration and Operations Mission Directorates**
  - Asteroid identification and characterization efforts for target selection
  - Solar electric propulsion for transport to and return of the target asteroid
  - Autonomous guidance and control for proximity operations and capture
  - Orion and Space Launch System (SLS) missions for asteroid rendezvous
  - Technologies for astronaut extra-vehicular activities
- **Each individual activity provides an important capability in its own right for human and robotic exploration**
- **We are working to utilize all of these activities to**
  - Identify and redirect a small asteroid to a stable orbit in the lunar vicinity; and
  - Investigate and return samples with our astronauts using the Orion and SLS assets.
- **The FY14 budget supports continued advancement of the important individual elements and furthers the definition of the overall potential mission.**

# Overall Mission Consists of Three Main Segments

## Identify

### **Asteroid Identification Segment:**

Ground and space based NEA target detection, characterization and selection

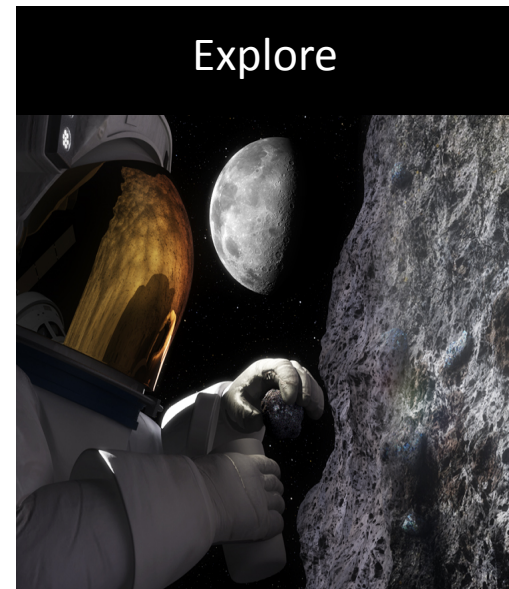

## Redirect

### **Asteroid Redirection Segment:**

Solar electric propulsion (SEP) based robotic asteroid redirect to trans-lunar space

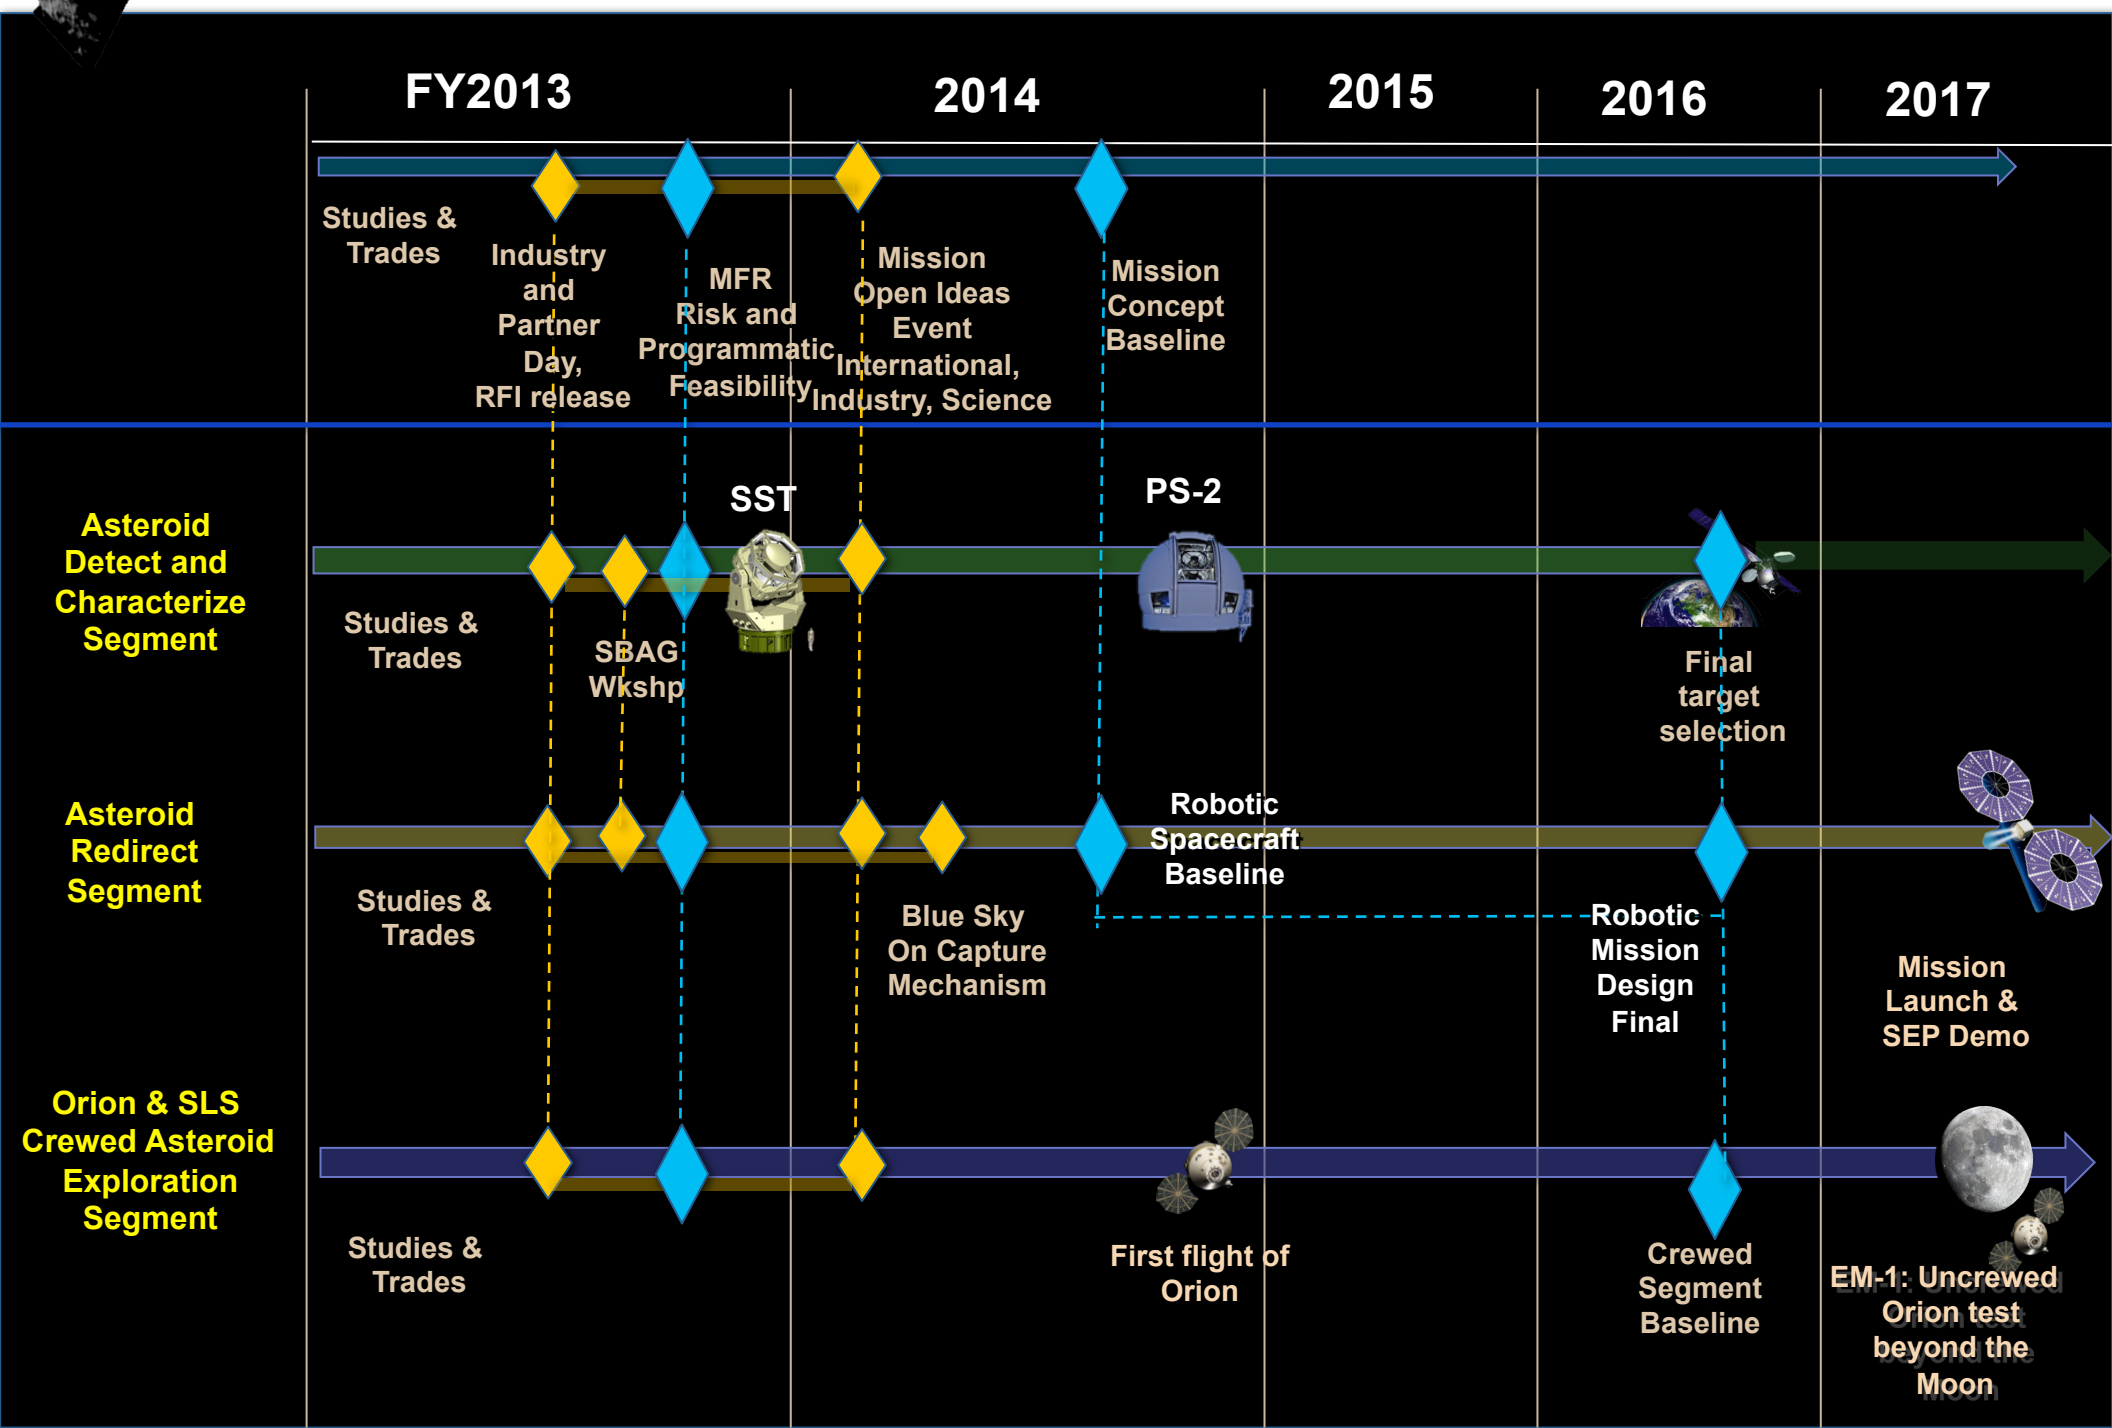

## Explore

### **Asteroid Crewed Exploration Segment:**

Orion and SLS based crewed rendezvous and sampling mission to the relocated asteroid

# Decision & Engagement Strategy

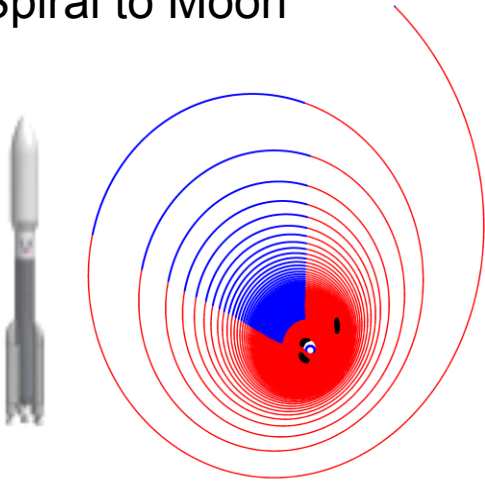

# Reference Robotic Mission Design Executive Summary

## 1. Launch (2 Options)

**1a.** *Atlas V* – Low Thrust Spiral to Moon

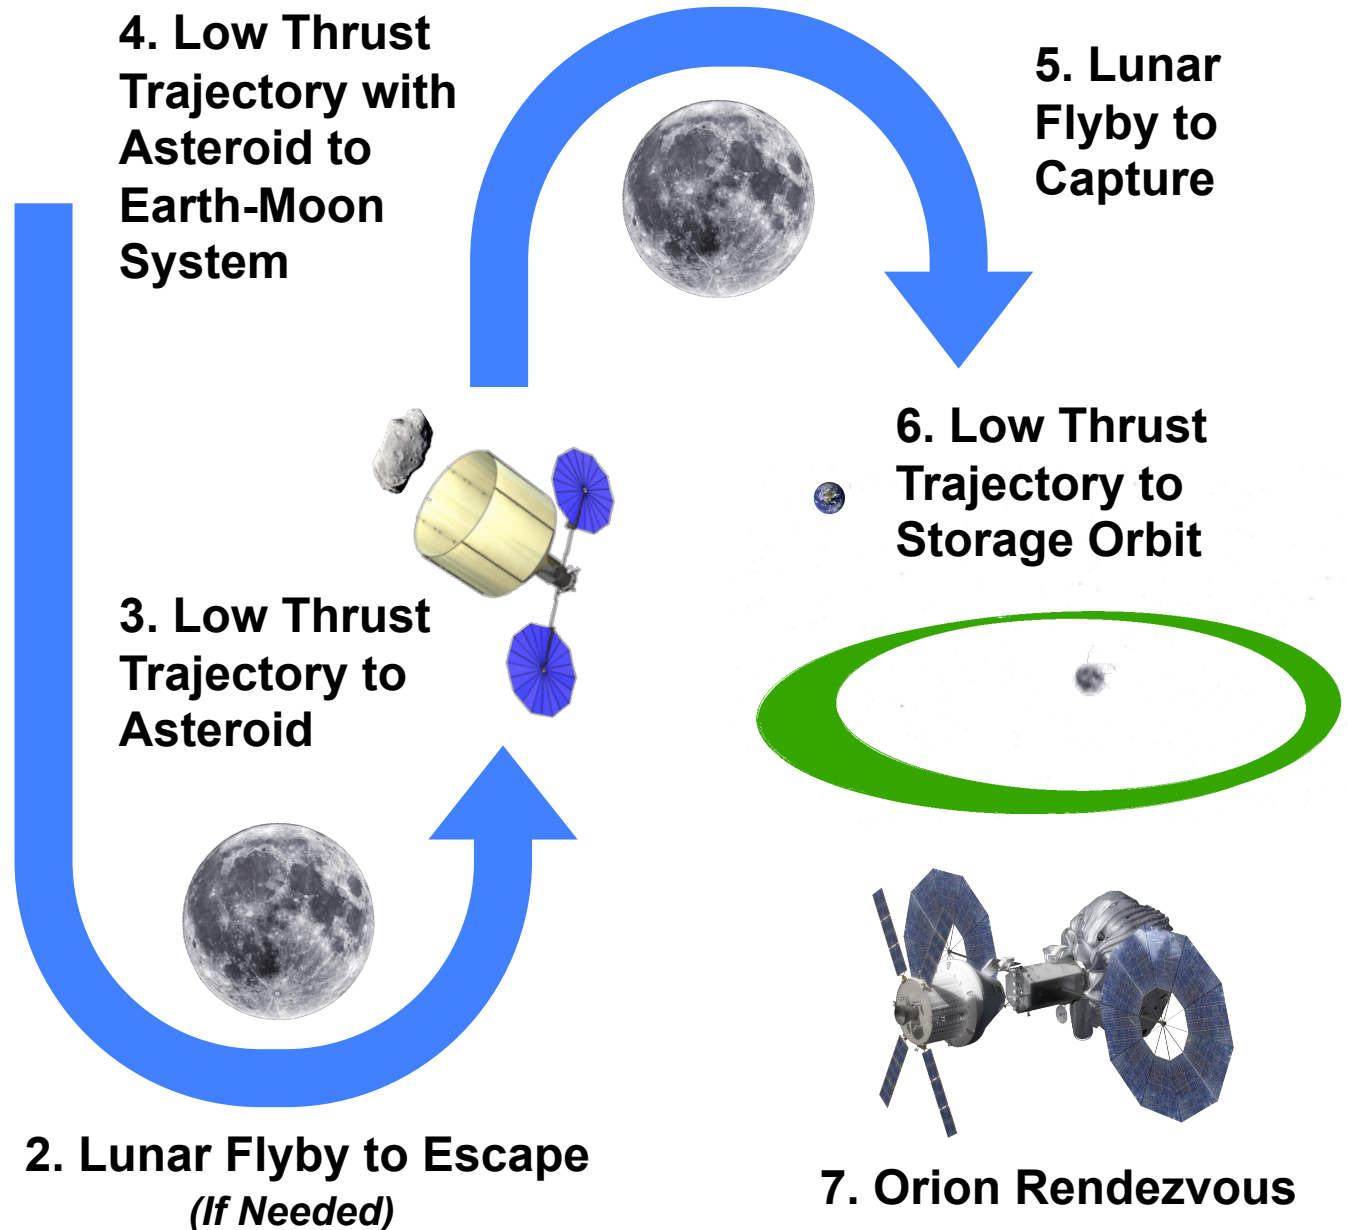

**1b.** *SLS* or *Falcon Heavy* – Direct Launch to Moon or to Asteroid

**4. Low Thrust Trajectory with Asteroid to Earth-Moon System**

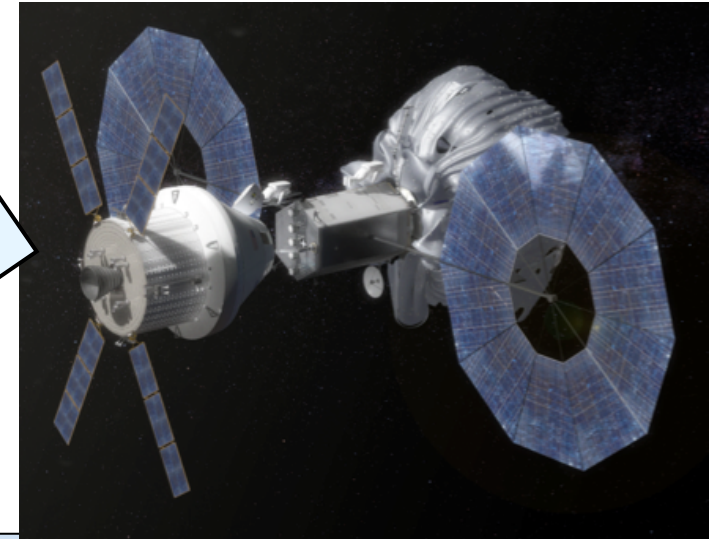

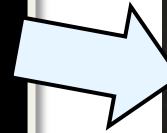

**3. Low Thrust Trajectory to Asteroid**

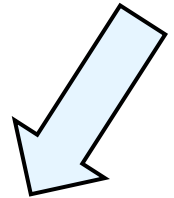

# Explore: Orion Mission Overview

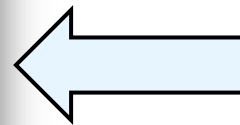

Deliver Crew in Orion

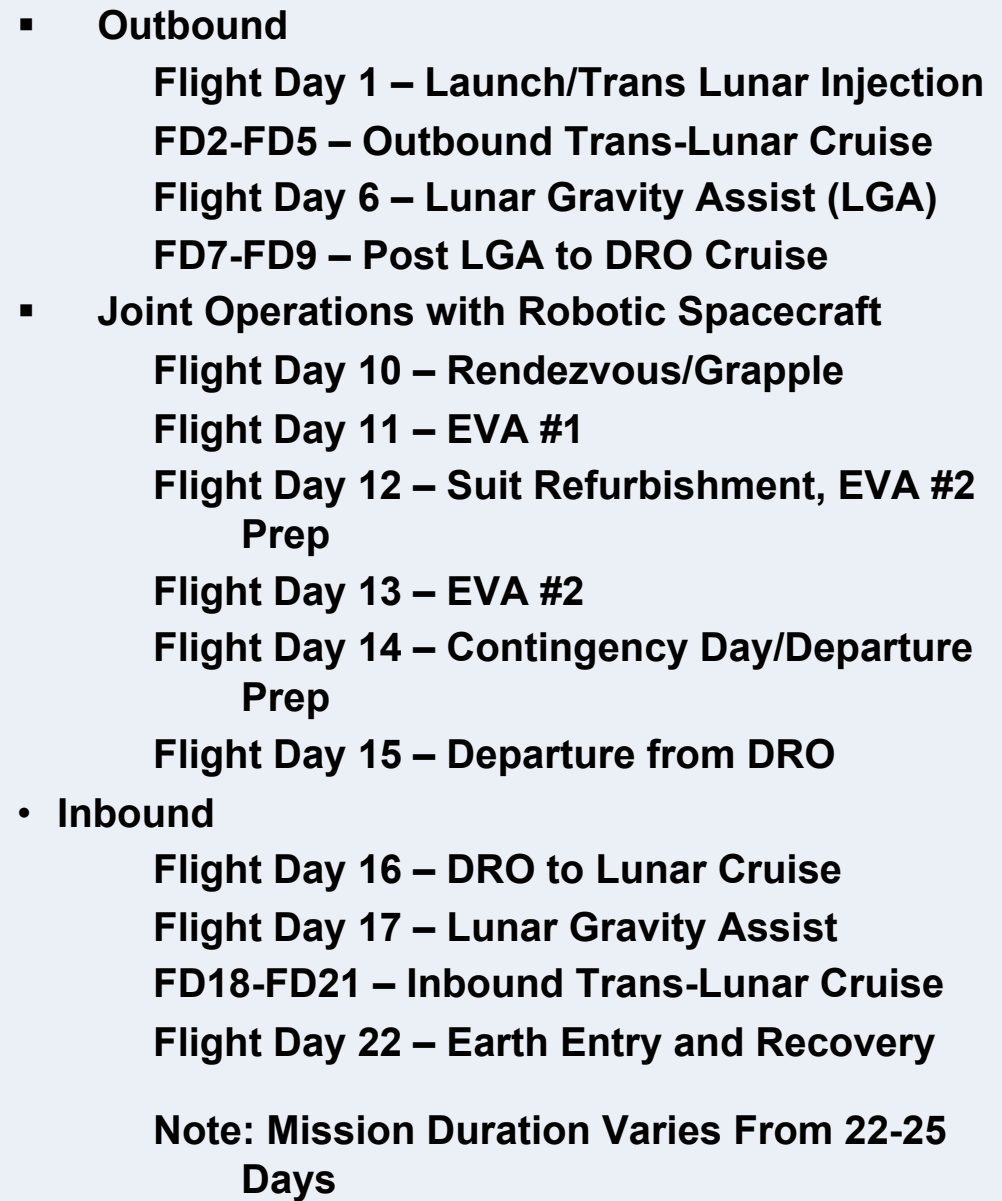

Attach Orion to robotic spacecraft

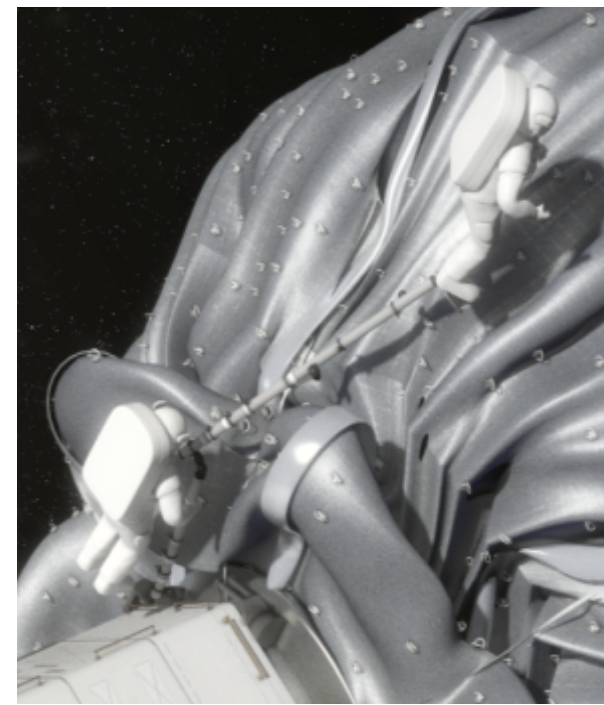

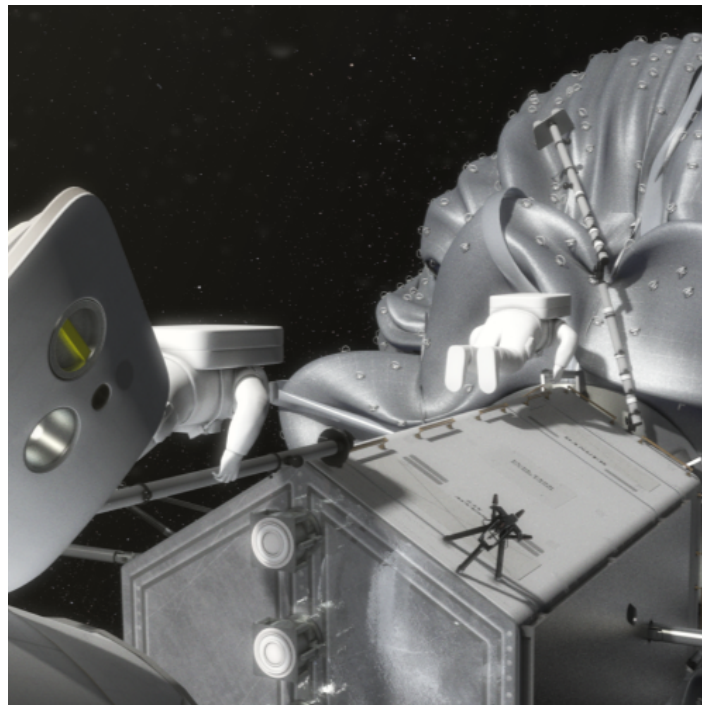

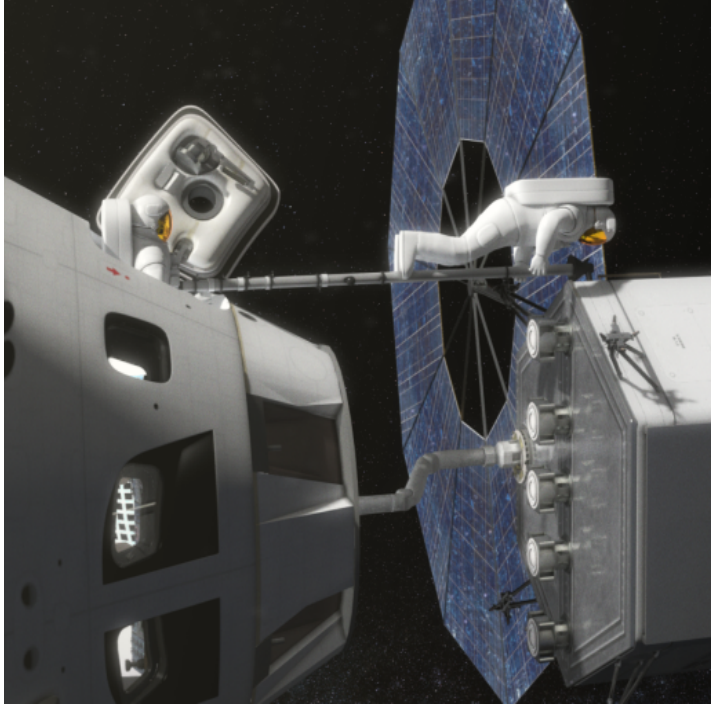

Perform Extra- Vehicular Activity (EVA) to retrieve asteroid samples

Return crew safely to Earth with  
asteroid samples in Orion

# Notional EVA Operations From Orion

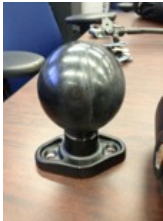

- Two EVAs executed from Orion
- Crew translates from Orion to robotic spacecraft
- EVA Tool box prepositioned on robotic spacecraft
- Telescoping booms pre-stowed on robotic spacecraft
- Crewmember stabilized on portable foot restraint for worksite
- Loops available on capture mechanism for additional stabilization

# Notional Design for EVA: Robotic Spacecraft

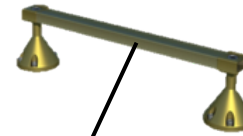

## Translation Boom and Attach Hardware

- Translation from Orion to spacecraft
- Translation from spacecraft to capture device bag for asteroid access

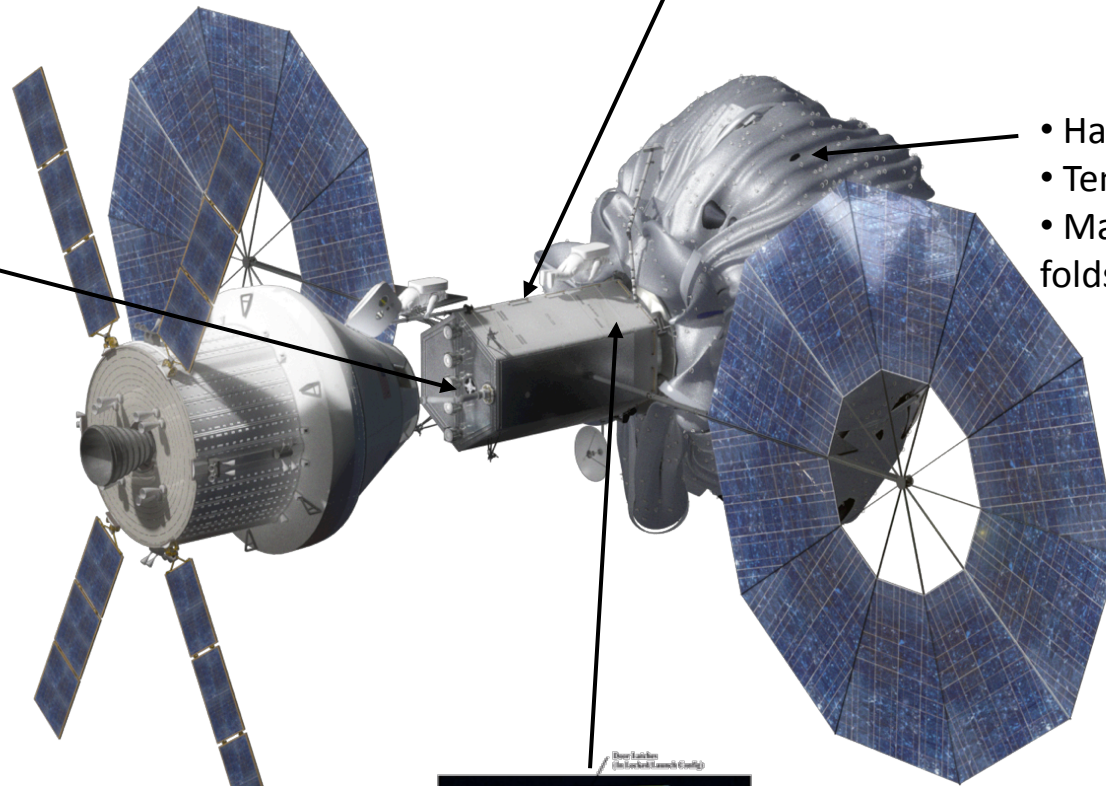

## Hand Rails

- Translation path from aft end of spacecraft to capture device
- Ring of hand rails around spacecraft near capture device

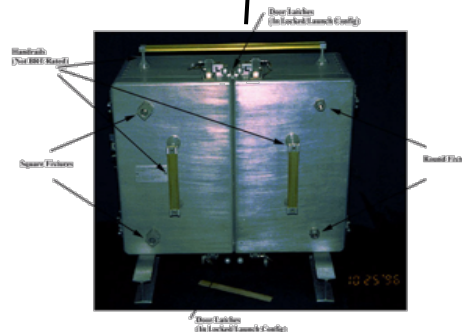

## EVA Tether Points

- Hand-over-hand translation
- Temporary restraint of tools
- Management of loose fabric folds

## Pre-positioned EVA Items

- Tool box to offset mass in Orion
- Two additional translation booms

# Asteroid Mission Supports

## Long-Term Human Mars Exploration Strategy

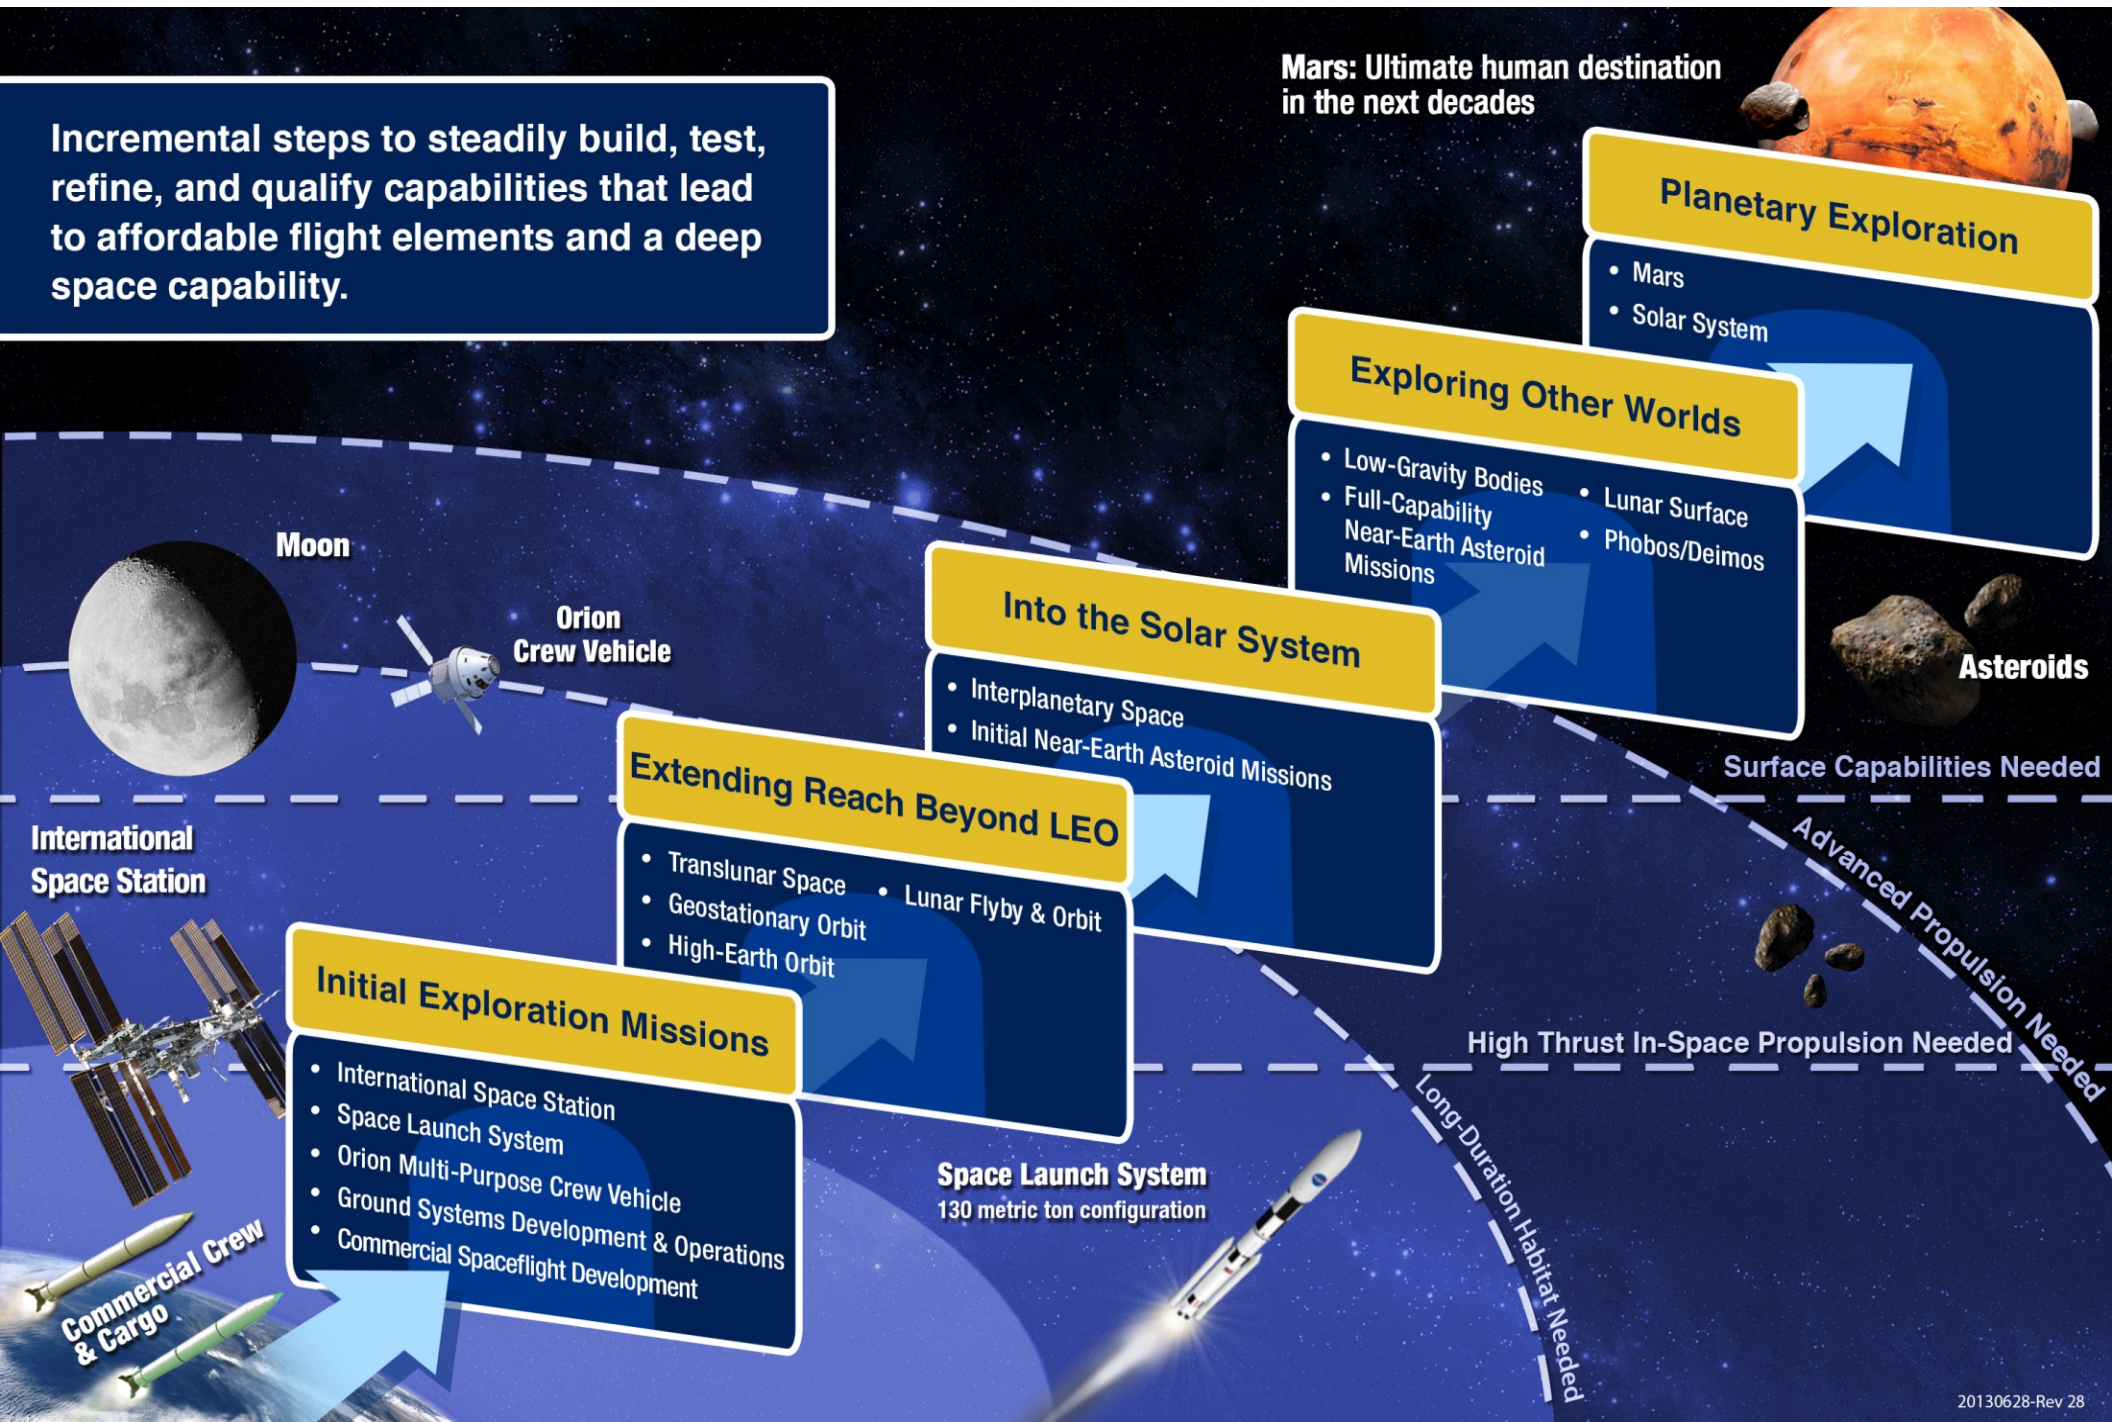

- Demonstration of Core Capabilities for deep space missions:
  - Block 1 SLS, Orion
  - 40kW Solar Electric Propulsion System
  - EVA, rendezvous, proximity operations, docking or grapple, deep space navigation and communications
  - Human operations and risk management beyond low earth orbit
  - Sample acquisition, caching, storage operations, and crew transfer operations for future Lunar/Mars sample return missions
- Demonstrates ability to work and interact with a small planetary body:
  - Systems for instrument placement, sample acquisition, material handling, and testing
  - Understanding of mechanical properties, environment, and mitigation of hazards

# Capability Driven Framework

Incremental steps to steadily build, test, refine, and qualify capabilities that lead to affordable flight elements and a deep space capability.

# Mars Exploration Capability Build-Up Using Asteroid Redirect Mission and ISS
